Marine Hovercraft Technology Robert Longley Trillo,1971 **Marine Hovercraft Technology** R. L. Trillo,1971
Hovercraft Technology, Economics and Applications J.R. Amyot,2013-10-22 The amphibious versatility marine speed and low footprint pressure have given the hovercraft a role in specialized applications Among them are search and rescue emergency medical services military and arctic operations icebreaking patrol law enforcement ferries and recreational activities such as racing To meet these demands the hovercraft has undergone considerable development since its inception A comprehensive and timely review of the analysis design operation economics and applications of hovercraft is presented in this volume by a team of highly qualified experts The topics covered range from first principles to the state of the art with extensive references to current literature The overall presentation is intended not to exceed the final year level of undergraduate engineering The introduction and summary sections of all chapters are intended to give a qualitative grasp of the material covered without having to read all the technical portions In varying degrees the volume will appeal to managers decision support staff operators technologists undergraduate students and anyone entering the hovercraft field or seeking an introduction to it It will also be of interest to design engineers researchers and graduate students Thus this volume can serve as an up to date reference on several important aspects of hovercraft for a wide range of readers

Vehicle Dynamics Rao V. Dukkipati,2000 Growing worldwide populations increasingly require faster safer and more efficient transportation systems These needs have led to a renewed interest in high speed guided ground transportation technology inspired considerable research and instigated the development of better analytical and experimental tools A very significant body of knowledge currently exists but has primarily remained scattered throughout the literature Vehicle Dynamics consolidates information from a wide spectrum of sources in the area of guided ground transportation Each chapter provides a concise thorough statement of the fundamental theory followed by illustrative worked examples and exercises The author also includes a variety of unsolved problems designed to amplify and extend the theory and provide problem solving experience The subject of guided ground transportation is vast but this book brings together the core topics providing in depth treatments of topics ranging from system classification analysis and response to lading dynamics and rail air cushion and maglev systems In doing so Vehicle Dynamics offers a singular opportunity for readers to build the solid background needed for solving practical vehicle dynamics problems or pursuing more advanced or specialized studies

and Surface Effect Ships SES It begins by introducing hovercraft types and their development and application throughout the
world in the last three decades before going on to discuss the theoretical aspects of ACV and SES craft covering their
hovering performance dynamic trim over calm water resistance stability manoeuvrability skirt configuration and analysis of
forces acting on the skirts ACV and SES seakeeping and the methodology of scaling aerodynamic and hydrodynamic forces
acting on the ACV SES from model test data The latter chapters describe a design methodology including design criteria and
standard methods for estimating craft performance lift system design skirt design hull structure propulsion systems and
power unit selection Much technical information data and references to further work on hovercraft and SES design is
provided The book will be a useful reference to engineers technicians teachers students both undergraduate and
postgraduate operators etc who are involved in ACV SES research design construction and operation Guides the reader on
how to perform machinery and systems selection within ACV and SES overall design For teachers students both at under and
