May, 1999-09 Algebraic topology is a basic part of modern mathematics and some knowledge of this area is indispensable for
any advanced work relating to geometry including topology itself differential geometry algebraic geometry and Lie groups
This book provides a detailed treatment of algebraic topology both for teachers of the subject and for advanced graduate
students in mathematics either specializing in this area or continuing on to other fields J Peter May's approach reflects the
enormous internal developments within algebraic topology over the past several decades most of which are largely unknown
to mathematicians in other fields But he also retains the classical presentations of various topics where appropriate Most
chapters end with problems that further explore and refine the concepts presented The final four chapters provide sketches
of substantial areas of algebraic topology that are normally omitted from introductory texts and the book concludes with a
