HyperGraph and SuperHyperGraph Theory with Applications Takaaki Fujita,Florentin Smarandache,2025-12-01 Hypergraphs generalize this framework by allowing hyperedges that connect more than two vertices Superhypergraphs further enrich the model through iterated powerset constructions capturing hierarchical and self referential structures among hyperedges An SuperHyperGraph is a mathematical structure in which each vertex corresponds to an superhyperfunction defined on a base set while the hyperedges group such functions together to represent higher order relationships and contextual connections Systematic research on SuperHyperGraphs is still relatively limited compared with the extensive literature on graphs and hypergraphs To help bridge this gap this book presents a survey of fundamental and advanced concepts related to SuperHyperGraphs Our aim is twofold i to increase the visibility and accessibility of SuperHyperGraph theory and thereby stimulate further research and ii to deepen the mathematical understanding of their structures among researchers and practitioners who work with graph and hypergraph based models

Intelligent Information Processing and Web Mining Mieczyslaw A. Klopotek,Slawomir T. Wierzchon,Krzysztof Trojanowski,2013-06-05 This volume contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS IIPWM 03 which was held in Zakopane Poland on June 2 5 2003 This conference extends a series of 12 successful symposia on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence The idea of organizing such meetings dates back to 1992 Our main intention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators This idea proved to be attractive enough that we decided to continue such meetings As the years went by the workshops has transformed into

regular symposia devoted to such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i e Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evolutionary Algorithms At present about 50 papers prepared by researchers from Poland and other countries are usually presented This year conference is an attempt to draw a much broader international audience on the one hand and to devote much more attention to the newest developments in the area of Artificial Intelligence Therefore special calls for contributions on artificial immune systems and search engines
