*Multiprocessor Computer Architectures* Terry J. Fountain, Malcolm J. Shute, 1990 For over forty years most of the world has designed its computers after a single fashion This style which has come to be known as the von Neumann model after one of its originators is showing increasing signs of being inadequately powerful for future needs Efforts to discover alternative models for so long a trickle are at least becoming a flood This book reports on the current status of a number of these efforts This book is addressed to two main audiences First it is aimed at the reader who is new to the world of non von Neumann computers either in the area of design or that of application By taking the form of a catalogue of projects bound in a single volume it serves as a particularly convenient introductory text Thus it can be used to

obtain a feel for the problems which designers are presently confronting and the solutions which they are developing Indeed the newcomer to the field with the benefit of a fresh and unbiased viewpoint may be in the best position to read through these collected reports and to identify some common point which has hitherto gone unnoticed or unexploited Second the book is aimed at the reader who is experienced in one particular area or discipline of non von Neumann computer design It serves as an introduction to hardware design for the computer scientist and as an introduction to parallel programming philosophy for the electronics engineer
