Zomaya, Fikret Ercal, Stephan Olariu, 2000-11-14 Solving problems in parallel and distributed computing through the use of bioinspired techniques Recent years have seen a surge of interest in computational methods patterned after natural phenomena with biologically inspired techniques such as fuzzy logic neural networks simulated annealing genetic algorithms or evolutionary computer models increasingly being harnessed for problem solving in parallel and distributed computing *Solutions to Parallel and Distributed Computing Problems* presents a comprehensive review of the state of the art in the field providing researchers and practitioners with critical information on the use of bio inspired techniques for improving software and hardware design in high performance computing Through contributions from top leaders in the field this important book brings together current research results exploring some of the most intriguing and cutting edge topics from the world of biocomputing including Parallel and distributed computing of cellular automata and evolutionary algorithms How the speedup of bio inspired algorithms will help their applicability in a wide range of problems Solving problems in parallel simulation through such techniques as simulated annealing algorithms and genetic algorithms Techniques for solving scheduling and load balancing problems in parallel and distributed computers Applying neural networks for problem solving in wireless communication systems Computational Collective Intelligence Tadeusz M. Szuba, 2001-03-07 Introducing a groundbreaking approach to understanding measuring and applying Collective Intelligence Does Collective Intelligence CI exist and if so how can it be characterized quantified and harnessed Questions such as these continue to be hotly debated within both the scientific and philosophical communities Yet few researchers working in the fields of artificial intelligence or distributed computing doubt CI s enormous potential value to the future of computing Unfortunately for lack of a rigorous formal theory of Collective Intelligence most attempts to analyze CI systems have been disappointing at best In *Computational Collective Intelligence* Professor Tadeusz Szuba does much to rectify that situation by developing for the first time both a formal definition of CI and practical guidelines for its assessment and applications Working from the ground up

Dr Szuba begins with a stimulating and insightful discussion of the types of intelligence including individual artificial and collective into which he brings ideas from AI information theory and distributed computing as well as psychology sociology animal behavior cognitive science and other relevant disciplines He tackles the problem of computational models for simulating and measuring CI He explores all theoretically feasible models of CI computations and presents a groundbreaking nondeterministic approach using the Random PROLOG Processor RPP as a CI modeling and evaluation tool He then introduces the Collective Intelligence Quotient IQS and develops clear cut guidelines for measuring it In the final chapters he lays the foundation for a dynamic new discipline Collective Intelligence Engineering CIE and considers its potential applications as an organizational restructuring tool
