Sensor-Based Robots: Algorithms and Architectures C.S. George Lee, 2012-12-06 Most industrial robots today have little or no sensory capability Feedback is limited to information about joint positions combined with a few interlock and timing signals These robots can function only in an environment where the objects to be manipulated are precisely located in the proper position for the robot to grasp i e in a structured environment For many present industrial applications this level of performance has been adequate With the increasing demand for high performance sensor based robot manipulators in assembly tasks meeting this demand and challenge can only be achieved through the consideration of 1 efficient acquisition and processing of intemaVextemal sensory information 2 utilization and integration of sensory information from various sensors tactile force and vision to acquire knowledge in a changing environment 3 exploitation of inherent robotic parallel algorithms and efficient VLSI architectures for robotic computations and finally 4 system integration into a working and functioning robotic system This is the intent of the Workshop on Sensor Based Robots Algorithms and Architectures to study the fundamental research issues and problems associated with sensor based robot manipulators and to propose approaches and solutions from various viewpoints in improving present day robot manipulators in the areas of sensor fusion and integration sensory information processing and parallel algorithms and architectures for robotic computations

Control and Dynamic Systems V40: Advances in Robotic Systems Part 2 of 2 C.T. Leonides, 2012-12-02 Advances in Robotic Systems Part 2 is the second of a companion set of two volumes on advances in robotic systems dynamics and control This book comprises nine chapters with the first focusing on kinesthetic feedback techniques in teleoperated systems The succeeding chapters then delve into topics such as parallel algorithms and fault tolerant reconfigurable architecture for robot kinematics and dynamics computations trajectory planning for robot control and a control systems perspective Other chapters cover simplified techniques for adaptive control of robotic systems theory and applications of configuration control for redundant manipulators nonlinear feedback for force control of robot manipulators systolic architectures for dynamic control of manipulators inverse dynamics and forward dynamics This book will be of interest to practitioners in the fields of computer science systems science and mathematics
