you'll learn how to design support that Scales without losing empathy Automates without damaging trust Reduces volume without blocking customers Uses AI without turning your brand cold or defensive Preserves human judgment where it matters most Connects support directly to retention and lifetime value You'll discover why speed can hurt satisfaction why ticket volume is a misleading metric and why escalation isn't failure it's intelligence when done right Who This Book Is For This book is for Founders and executives scaling fast and feeling the cracks Support and CX leaders under pressure to do more with less Operations and automation professionals implementing AI responsibly Product and growth leaders who care about retention not just acquisition Any organization that wants efficiency without sacrificing humanity If your business depends on long term relationships repeat customers or recurring revenue this book is not optional reading When You Should Read This Book Read this book Before automation damages your brand Before burnout becomes normalized Before silent churn shows up in your revenue Before your systems scale chaos instead of clarity The earlier you rethink support the cheaper the fix becomes The Real Promise of This Book This book will not give you scripts hacks or shortcuts It will give you something far more valuable a way of thinking that stays relevant as tools change AI advances and your company grows You'll finish this book seeing customer support not as a cost center but as a trust system that quietly determines whether customers stay expand or leave And once you see that you can't unsee it If You Care About Scaling Without Losing Control Most companies automate support Very few rebuild it correctly The Scalable Support System shows you how to be one of the few If you want faster growth without fragile relationships automation without alienation and scale without losing the human touch This is the book you read next Click Buy Then build a support system people actually trust

ARTIFICIAL INTELLIGENCE (AI) APPLICATIONS IN AUTOMATING CUSTOMER SERVICES AND EMPLOYEE SUPERVISION

Siliang Tong, 2020 Across two essays I explore how artificial intelligence AI applications can help businesses automate customer service with deep learning driven natural conversation and improve employee performance with work supervision I apply machine learning methods such as audio analytics and text mining as well as field experiments to explore these new AI driven capabilities in customer service and employee supervision automation Substantively this research tackles emerging business questions regarding how AI applications can assist customer purchases and employee job performance In Essay One I apply two experiments to investigate when and how AI voicebots work or struggle in persuading customers relative to human agents In Experiment 1 I apply audio analytics to extract agents voice features i.e. pitch amplitude and speed and speech content i.e. selling adaptivity My analyses suggest two distinct routes to explain how agents speech patterns account for their performance Analyses in Experiment 2 demonstrate that relative to human agents AI bots could backfire and lead to worse performance when the customer persuasion task is more complex In my second essay I explore the coexistence of performance improvement and employee resistance to AI supervision Specifically I develop a novel two by two field experiment which randomly assigns the AI or human supervision entity and discloses the entity or not to separate the

economic gain from negative reactance to AI In addition I uncover the underlying mechanism by identifying employees subjective bias to the AI feedback quality and heightened fear of job replacement once they know the supervision entity is AI rather than human managers I propose two strategies to alleviate employees resistance to AI supervision
