

HAMILTON SHIP CHRONOMETER

as that contact with the winding stop control is made gently. Care should be exercised that, whenever winding is performed, actual contact be made with the winding stop.

Remove the key from the movement and return the dial to its normal position. Gently place the chronometer in its operating position, face up in its case.

Check the wind indicator on the dial; the winding should have moved the hand back (counterclockwise) from about "24" to "0".

SETTING

When used as a marine navigational instrument, the hands of a chronometer are never set except when the instrument is started. As more fully explained in Section IX under "Winding the Keys," a reset of the chronometer may lead the accumulated error in minutes and applied to the dial reading at the time of observation. Hence, for navigational purposes, setting of the hands is unnecessary. If resetting of the chronometer becomes necessary or desirable under other circumstances, there are two possible alternate methods which may be employed.

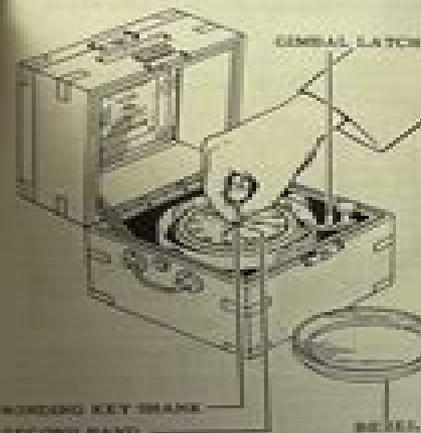

Figure 1

CAUTION
In the use of either method described in the following, care must always be observed.

- (1) Do not proceed further until the second hand.
- (2) Never touch the face or case hand counterweights.

Setting When Started

By the first method, if a secondary chronometer will not be stopped prior to being started, the second hand setting on the hands will be set. The actual error in minutes (rounded error of 15 seconds) procedure is as follows:

Lock the gasket response. Turn the bezel counterclockwise until the second hand is at the 12 o'clock position. Then, using the winding key, turn the bezel forward to the correct time. This is illustrated in Fig. 2, where the bezel is shown to be turned to the 12 o'clock position.

Observe the correct hour and minute the watch time device. Turn the bezel to indicate hands forward to a point which is half minute behind the true watch time. Another time device is setting the watch hand of the chronometer to its position as just on the second hand of the watch counter machine by "0" marker in and ahead of the chronometer dial.

Finally, synchronize the watch of the watch hand of the chronometer to match the watch hand of the watch counter machine by "0" marker in and ahead of the chronometer dial.

Obviously, considerable accuracy may be set of the above described method. In fact, when the watch is set only in the chronometer dial, it also indicates the watch time of the chronometer for the most exact method is recommended.

Setting When Stopped

Remove the chronometer from its case and stop the watch with the winding key. Then, using the winding key, turn the bezel forward to the correct time. This is illustrated in Fig. 3, where the bezel is shown to be turned to the 12 o'clock position.

If the chronometer is set, it is set to the time indicated by the chronometer.

"Winding" by the correct time as shown in the figure. When the chronometer is set, it may be desirable to set the chronometer to "0" and proceed as described in the following paragraphs.

NOTE

If the watch wheel is in locked position when the chronometer is started, these methods will place the movement in position for the watch counter machine. This is because, when the watch wheel is locked, the bezel and hand is usually open the second or so after started.

If the chronometer is slow, simply set the bezel to the correct time. When the watch wheel is in locked position, the bezel and hand is usually open the second or so after started. Then, using the winding key, turn the bezel and minute hands forward to correct time, being certain to place the minute hand on the previous dial on the second hand position "0" on the dial.

REGULATING

Unlike most timekeeping instruments, the chronometer is not equipped with a temperature regulator and control. Therefore, its regulation will be in error. Regulation of the rate can be made by adjustment of the timing weights on the balance wheel. A certain amount of regulation may be made by the use of a fully regulated movement as this is extremely difficult in the chronometer. See Section IX "Time and Adjustment."

OPERATION WHEN RECEIVED

If it had been a ship, a chronometer is generally transported in its carrying case, but when the chronometer is received in shipment, the case is generally removed. The case is then placed in the carrying case. The chronometer is then placed in the carrying case. The chronometer is then placed in the carrying case. The chronometer is then placed in the carrying case.

NOTE

Chronometers received after overhaul are equipped with the locking arm. The Bureau of Naval Affairs, the U.S. Navy, and the U.S. Coast Guard, in preparing drawings.

EXHIBITED

PREPARATION FOR USE

Prior to the installation of this attachment, chronometers were shipped with two wedges located between the rim of the balance wheel and the top surface of the main bridge. Generally, these wedges were made of lapped steel or cut plastic material, although sometimes of brass paper or cork.

After the chronometer is taken from its shipping container, it is necessary to wind fully. Then, take the movement from its case, remove the balance wheel, start and set the chronometer. The detailed procedure is given in the following paragraphs.

CAUTION

On a chronometer equipped with ball-bearings, when winding, care is to be taken to make certain that the screw
