Mapping Class Groups and Moduli Spaces of Riemann Surfaces Carl-Friedrich Bödigheimer, Richard Martin Hain, 1993

The study of mapping class groups and moduli spaces of compact Riemann surfaces is currently a central topic in topology algebraic geometry and conformal field theory This book contains proceedings from two workshops held in the summer of 1991 one at the University of Göttingen and the other at the University of Washington at Seattle The papers gathered here represent diverse approaches and contain several important new results With both research and survey articles the book appeals to mathematicians and physicists **Moduli Spaces of Curves, Mapping Class Groups and Field Theory** Xavier Buff, 2003 It concludes with a study of the canonical Galois action on the fundamental groupoids computed using Grothendieck Teichmüller theory Finally Chapter 3 studies strict ribbon categories which are closely related to braided tensor categories here they are used to construct invariants of 3 manifolds which in turn give rise to quantum field theories BOOK JACKET

Problems on Mapping Class Groups and Related Topics Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the combinatorial and cohomological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers

Moduli Spaces of Riemann Surfaces Benson Farb, Richard Hain, Eduard Looijenga, 2013-08-16 Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS Park City Mathematics Institute This book presents the nine different lecture series comprising the summer school covering a selection of topics of current interest The introductory courses treat mapping class groups and Teichmüller theory The more advanced courses cover intersection theory on moduli spaces the dynamics of polygonal billiards and moduli spaces the stable cohomology of mapping class groups the structure of Torelli groups and arithmetic mapping class groups The courses consist

of a set of intensive short lectures offered by leaders in the field designed to introduce students to exciting current research in mathematics These lectures do not duplicate standard courses available elsewhere The book should be a valuable resource for graduate students and researchers interested in the topology geometry and dynamics of moduli spaces of Riemann surfaces and related topics Titles in this series are co published with the Institute for Advanced Study Park City Mathematics Institute Members of the Mathematical Association of America MAA and the National Council of Teachers of Mathematics NCTM receive a 20% discount from list price

A Primer on Mapping Class Groups Benson Farb, Dan Margalit, 2011-09-26 The study of the mapping class group $\text{Mod } S$ is a classical topic that is experiencing a renaissance It lies at the juncture of geometry topology and group theory This book explains as many important theorems examples and techniques as possible quickly and directly while at the same time giving full details and keeping the text nearly self contained The book is suitable for graduate students A Primer on Mapping Class Groups begins by explaining the main group theoretical properties of $\text{Mod } S$ from finite generation by Dehn twists and low dimensional homology to the Dehn Nielsen Baer theorem Along the way central objects and tools are introduced such as the Birman exact sequence the complex of curves the braid group the symplectic representation and the Torelli group The book then introduces Teichmüller space and its geometry and uses the action of $\text{Mod } S$ on it to prove the Nielsen Thurston classification of surface homeomorphisms Topics include the topology of the moduli space of Riemann surfaces the connection with surface bundles pseudo Anosov theory and Thurston's approach to the classification

Automorphisms of Riemann Surfaces, Subgroups of Mapping Class Groups and Related Topics Aaron Wootton, S. Allen Broughton, Jennifer Paulhus, 2022-02-03 Automorphism groups of Riemann surfaces have been widely studied for almost 150 years This area has persisted in part because it has close ties to many other topics of interest such as number theory graph theory mapping class groups and geometric and computational group theory In recent years there has been a major revival in this area due in part to great advances in computer algebra systems and progress in finite group theory This volume provides a concise but thorough introduction for newcomers to the area while at the same time highlighting new developments for established researchers The volume starts with two expository articles The first of these articles gives a historical perspective of the field with an emphasis on highly symmetric surfaces such as Hurwitz surfaces The second expository article focuses on the future of the field outlining some of the more popular topics in recent years and providing 78 open research problems across all topics The remaining articles showcase new developments in the area and have specifically been chosen to cover a variety of topics to illustrate the range of diversity within the field
