Self-Organization in Optical Systems and Applications in Information Technology Mikhail A. Vorontsov, Walter B. Miller, 2012-12-06 Contrary to monographs on non linear optics this book concentrates on problems of self organization in various important contexts The reader learns how patterns in non linear optical systems are created and what theoretical methods can be applied to describe them Next various aspects of pattern formation such as associative memory information processing spatio temporal instability photo refraction and so on are treated The book addresses graduate students and researchers in physics and optical engineering

Self-Organization and the City Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents areal challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner s dilemma is becoming more and more visible cities and megacities seem to be un plannable In this book Juval Portugali intro duces a new idea Cities are self organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co workers he has performed detailed model calculations on cellular nets It has been a great pleasure and a wonderful experience for me to discuss these concepts with Juval Portugali over a number of years I was repeatedly and deeply impressed by the way he established profound and often surprising links to other fields of science

Photorefractive Materials and Their Applications 1 Peter Günter, Jean Pierre Huignard, 2006-04-09 This is the first

volume of a set of three within the Springer Series in Optical Sciences and is devoted to photorefractive effects photorefractive materials and their applications Since the publication of our first two Springer books on Photorefractive Materials and Their Applications Topics in Applied Physics Vols 61 and 62 almost 20 years ago a lot of research has been done in this area New and often expected effects have been discovered theoretical models developed known effects finally explained and novel applications proposed We believe that the field has now reached a high level of maturity even if research continues in all areas mentioned above and with new discoveries arriving quite regularly We therefore have decided to invite some of the top experts in the field to put together the state of the art in their respective fields This after we had been encouraged to do so for more than ten years by the publisher due to the fact that the former volumes were long out of print

Brain Dynamics Hermann Haken, 2006-11-22 Twenty Five Years of Springer Series in Synergetics The year 2002 marks the 25th anniversary of the Springer Series in Synergetics It started in 1977 with my book Synergetics An Introduction Nonequilibrium Phase Transitions and Self Organization in Physics Chemistry and Biology In the near future the 100th volume of this series will be published Its success has been made possible by the contributions of outstanding authors who presented their quite often pioneering results to the science community well beyond the borders of a special discipline Indeed interdisciplinarity is one of the main features of this series But interdisciplinarity is not enough The main goal is the search for common features of self organizing systems in a great variety of seemingly quite different systems or still more precisely speaking the search for general principles underlying the spontaneous formation of spatial temporal or functional structures The objects studied may be as diverse as lasers and fluids in physics pattern formation in chemistry morphogenesis in biology brain functions in neurology or self organization in a city As is witnessed by several volumes great attention is being paid to the pivotal interplay between deterministic and stochastic processes as well as to the dialogue between theoreticians and experimentalists All this has contributed to a remarkable cross fertilization between disciplines and to a deeper understanding of complex systems The timeliness and potential of such an approach are also mirrored among other indicators by numerous interdisciplinary workshops and conferences all over the world
