Semantic Information Processing:

Semantic Information Processing Marvin Minsky, 2003-01-01 *What Computers Still Can't Do* Hubert L.

Dreyfus, 1992-10-30 When it was first published in 1972 Hubert Dreyfus's manifesto on the inherent inability of disembodied machines to mimic higher mental functions caused an uproar in the artificial intelligence community. The world has changed since then. Today it is clear that good old-fashioned AI based on the idea of using symbolic representations to produce general intelligence is in decline, although several believers still pursue its pot of gold and the focus of the AI community has shifted to more complex models of the mind. It has also become more common for AI researchers to seek out and study philosophy. For this edition of his now classic book Dreyfus has added a lengthy new introduction outlining these changes and assessing the paradigms of connectionism and neural networks that have transformed the field. At a time when researchers were proposing grand plans for general problem solvers and automatic translation machines Dreyfus predicted that they would fail because their conception of mental functioning was naive and he suggested that they would do well to acquaint themselves with modern philosophical approaches to human beings. *What Computers Can't Do* was widely attacked but quietly studied. Dreyfus's arguments are still provocative and focus our attention once again on what it is that makes human beings unique.

Semantic Information Processing Marvin Lee Minsky, 1968 **Semantic Information Processing**, 1985

Neurocognitive Mechanisms Gualtiero Piccinini, 2020 Gualtiero Piccinini presents a systematic and rigorous philosophical defence of the computational theory of cognition. His view posits that cognition involves neural computation within multilevel neurocognitive mechanisms and includes novel ideas about ontology, functions, neural representation, neural computation, and consciousness.

The Computational Theory of Mind Matteo Colombo, Gualtiero Piccinini, 2023-11-29 The Computational Theory of Mind says that the mind is a computing system. It has a long history going back to the idea that thought is a kind of computation. Its modern incarnation relies on analogies with contemporary computing technology and the use of computational models. It comes in many versions, some more plausible than others. This Element supports the theory primarily by its contribution to solving the mind-body problem, its ability to explain mental phenomena, and the success of computational modelling and artificial intelligence. To be turned into an adequate theory, it needs to be made compatible with the tractability of cognition, the situatedness and dynamical aspects of the mind, the way the brain works, intentionality, and consciousness.

Foundational Analysis Pertti Saariluoma, 1997 In a critical analysis of the assumptions underlying experimental psychology, Pertti Saariluoma urges social scientists to reflect upon their procedures and methodology. He has revisited the philosophy of science to find a new way of applying its methods to psychology. Foundational Analysis shows how it is possible to analyze existing methodological arguments and find loopholes in them and raises new issues for the rationale behind empirical technique. It will be of interest to researchers and students in cognitive science and other social sciences and the philosophy of science. *Proceedings of the 1975 International Conference on Cybernetics and Society*, 1975 □□
