Semantic Networks An Evidential Formalization And Its Connectionist Realization Research Notes In Artificial Intelligence:

Semantic Networks Lokendra Shastri, 1988 Shastri's book describes how a high level specification of hierarchically structured knowledge about concepts and their properties may be encoded as a massively parallel network of simple processing elements. The evidential formalization of semantic networks leads to a principled treatment of exceptions, multiple inheritance, and conflicting information during inheritance, and the best match or partial match computation during recognition. This formalization offers semantically justifiable solutions to a larger class of problems than existing formulations, e.g. default logic. The network operates without the intervention of a central controller or interpreter. The knowledge, as well as mechanisms for drawing limited inferences on it, are encoded within the network. It uses controlled spreading activation to solve inheritance and recognition problems in time proportional to the depth of the conceptual hierarchy, independent of the total number of concepts in the conceptual structure. The number of nodes in the connectionist network is at most quadratic in the number of concepts. The book has six chapters and one appendix. After the introduction in chapter 1, semantic networks, their properties, and formalizations are discussed in chapter 2. Especially the significance of inheritance and recognition and the evidential approach to it is pointed out here. Chapter 3 specifies a knowledge representation language. The problems of inheritance and recognition are reformulated in this language. In chapter 4, the evidential formalization and its application to inheritance and recognition are demonstrated. Section 4.1 derives an evidence combination rule. In the following two sections, this rule is compared to the DEMPSTER SHAFER evidence combination rule (section 4.2) and to the BAYES rule for computing conditional probabilities. The next two sections develop solutions to evidential inheritance (section 4.4) and evidential recognition (section 4.5) together with constraints for a conceptual structure. The connectionist realization of the memory network is developed in chapter 5. First, the need for parallelism is discussed (section 5.1), then the connectionist model (section 5.2) and other massively parallel models of semantic memory (section 5.3) are reviewed. The connectionist encoding of the high level specification is described in section 5.4, together with the connectivity and computational characteristics of node types. This is followed by examples of network encoding (section 5.5) and the elaboration of some implementation details (section 5.6). In section 5.7 and appendix A, there is a proof that the proposed network solves the inheritance and recognition problem in accordance with the evidential formulation and in time proportional to the depth of the conceptual hierarchy. Section 5.8 describes the simulation of the proposed system on a conventional computer, together with simulation runs of test examples, often cited as being problematic. The book ends with a general discussion (chapter 6).

Parallelization in Inference Systems
Bertram Fronhöfer, Graham Wrightson, 1992-04-22. This volume contains the proceedings of an international workshop on parallelism in inference systems held in Germany in December 1990. The topic of the workshop is still rather young, and several papers in the book are overview articles intended to provide a first orientation toward some of the more intensively

investigated subtopics The main part of the book is a compilation of research papers on parallelization in special domains of inference such as rewriting automatic reasoning logic programming and connectionist inference Appended to the book is a collection of short project summaries received in response to a worldwide email call The book is intended primarily for researchers working on inference systems who are interested in parallelizing their systems

Knowledge-Based Simulation Paul A. Fishwick, Richard B. Modjeski, 2012-12-06 Knowledge Based Simulation Methodology and Application represents a recent compilation of research material that reviews fundamental concepts of simulation methodology and knowledge based simulation applications Knowledge based simulation represents a new and exciting bridge area linking the fields of computer simulation and artificial intelligence This book will appeal to both theorists and practitioners who require simulation to solve complex problems A primary attraction of the book is its emphasis on both methodology and applications In this way the reader can explore new methods for encoding knowledge intensive information into a simulation model and new applications that utilize these methods

Semantic Networks in Artificial Intelligence Fritz W. Lehmann, Ervin Y. Rodin, 1992 Hardbound Semantic Networks are graphic structures used to represent concepts and knowledge in computers Key uses include natural language understanding information retrieval machine vision object oriented analysis and dynamic control of combat aircraft This major collection addresses every level of reader interested in the field of knowledge representation Easy to read surveys of the main research families most written by the founders are followed by 25 widely varied articles on semantic networks and the conceptual structure of the world Some extend ideas of philosopher Charles S Peirce 100 years ahead of his time Others show connections to databases lattice theory semiotics real world ontology graph grammars lexicography relational algebras property inheritance and semantic primitives Hundreds of pictures show semantic networks as a visual language of thought

Parallel Processing for Artificial Intelligence 3 J. Geller, H. Kitano, C.B. Suttner, 1997-02-10 The third in an informal series of books about parallel processing for Artificial Intelligence this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations However no assumption is made about the kind of parallelism to be used Transputers Connection Machines farms of workstations Cellular Neural Networks Crays and other hardware paradigms of parallelism are used by the authors of this collection The papers arise from the areas of parallel knowledge representation neural modeling parallel non monotonic reasoning search and partitioning constraint satisfaction theorem proving parallel decision trees parallel programming languages and low level computer vision The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history This volume provides the reader with a snapshot of the state of the art in Parallel Processing for Artificial Intelligence

topics covered include connectionist learning procedures dynamic connections in neural networks connectionist recruitment

KI-96: Advances in Artificial Intelligence Günther Görz, Steffen Hölldobler, 1996-09-04 This book constitutes the refereed proceedings of the 20th Annual German Conference on Artificial Intelligence KI 96 held in Dresden Germany in September 1996 The book presents three invited papers together with 23 revised full research papers nine posters and four systems demonstrations All contributions were carefully selected from a larger number of excellent submissions of which a considerable part had been submitted from abroad The papers address many subareas of AI however there is a certain focus on new developments in theorem proving knowledge representation and reasoning
