Semantics from Different Points of View R. Bäuerle, U. Egli, A. v. Stechow, 2013-04-09 **Semantics from Different Points of View** R. Bauerle, U. Egli, A. V. Stechow, 2014-01-15 *Words in Time* Regine Eckardt, Klaus von Heusinger, Christoph Schwarze, 2011-05-09

Meanings of words are constantly changing and the forces driving these changes are varied and diverse. Linguistic analyses are usually concerned with language internal processes while investigations of language external historical developments tend to disregard linguistic considerations. It is evident however that an investigation of diachronic semantics will have to consider both sides: a specific theory of meaning including a proper place for lexical semantics on the one hand and incorporate knowledge about the world and the social and cultural environment of speakers who use language as a tool for communication on the other. The collection focuses on meaning change as a topic of interdisciplinary research. Distinguished scholars in diachronic semantics, general linguistics, classical philology, philosophy of language, anthropology and history offer in depth studies of language internal and external factors of meaning change. This broad range of perspectives unprecedented in research publications of recent years is a pioneering attempt to mirror the multi-faceted nature of language as a formal, social, cognitive, cultural and historical entity. The contributions, each exploring the research issues, methods and techniques of their particular field, are directed towards a broader audience of interested readers, thus enhancing interdisciplinary exchange.

The Semantics/pragmatics Interface from Different Points of View Ken P. Turner, 1999. Hardbound. This volume examines explicitly the question of how the semantics and pragmatics of a number of expressions might be responsibly discussed. In the past the temptation has been for the expressions in question to be discussed either in terms of the semantics or in terms of the pragmatics but extremely rarely in terms of both. This book shows how revealing analyses for this interface can be provided for the expressions in question. In specially commissioned chapters from leading authors the points of view represented include linguistics, logic, computational linguistics and philosophy.

[Linguistic and Philosophical Perspectives about Reference](#) Ana Clara Polakof, 2025-11-13. Linguists and philosophers engage in a conversation about four questions in relation to reference: What is reference? Is there reference to the abstract? Is there sentential reference? Is there reference to time?

Readings in Cognitive Science Allan Collins, Edward E. Smith, 2013-10-02. *Readings in Cognitive Science: A Perspective from Psychology and Artificial Intelligence* brings together important studies that fall in the intersection between artificial intelligence and cognitive psychology. This book is composed of six chapters and begins with the complex anatomy and physiology of the human brain. The next chapters deal with the components of cognitive science such as the semantic memory similarity and analogy and learning. These chapters also consider the application of mental models which represent the domain specific knowledge needed to understand a dynamic system or natural physical phenomena. The remaining chapters discuss the concept of reasoning, problem solving, planning, vision and imagery. This book is of value to psychologists, psychiatrists, neurologists and researchers who are interested in

cognition Semantic Domains in Computational Linguistics Alfio Gliozzo, Carlo Strapparava, 2009-07-31 Semantic fields are lexically coherent the words they contain co occur in texts In this book the authors introduce and define semantic domains a computational model for lexical semantics inspired by the theory of semantic fields Semantic domains allow us to exploit domain features for texts terms and concepts and they can significantly boost the performance of natural language processing systems Semantic domains can be derived from existing lexical resources or can be acquired from corpora in an unsupervised manner They also have the property of interlinguality and they can be used to relate terms in different languages in multilingual application scenarios The authors give a comprehensive explanation of the computational model with detailed chapters on semantic domains domain models and applications of the technique in text categorization word sense disambiguation and cross language text categorization This book is suitable for researchers and graduate students in computational linguistics
