Principles Of Human Knowledge Three Dialogues:

Principles of Human Knowledge and Three Dialogues George Berkeley, 1999-02-18 Berkeley's idealism started a revolution in philosophy. As one of the great empiricist thinkers, he not only influenced British philosophers from Hume to Russell and the logical positivists in the twentieth century, he also set the scene for the continental idealism of Hegel and even the philosophy of Marx. There has never been such a radical critique of common sense and perception as that given in Berkeley's *Principles of Human Knowledge* (1710). His views were met with disfavour and his response to his critics was the *Three Dialogues between Hylas and Philonous*. This edition of Berkeley's two key works has an introduction which examines and in part defends his arguments for idealism as well as offering a detailed analytical contents list, extensive philosophical notes, and an index. ABOUT THE SERIES For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features including expert introductions by leading authorities, helpful notes to clarify the text, up-to-date bibliographies for further study, and much more.

A Treatise Concerning the Principles of Human Knowledge George Berkeley, 1998

The Oxford Philosophical Texts series consists of authoritative teaching editions of canonical texts in the History of Philosophy from the ancient world down to modern times. Each volume, issued in a uniform and affordable paperback format, provides a clear, well-laid-out text together with a comprehensive introduction by a leading specialist, giving the student detailed critical guidance on the intellectual context of the work and the structure and philosophical importance of the main arguments. Endnotes are supplied to expand further on the arguments and explain unfamiliar references and terminology, and a full bibliography and index are also included. The series aims to build up a definitive corpus of key texts in the Western philosophical tradition which will form a reliable and enduring resource for students and teachers alike. This volume contains Leibniz's most important texts, starting with the *Discourse on Metaphysics* (1686) which marks the beginning of maturity in Leibniz's ideas and ending with the *Monadology* (1714) written in response to requests for a systematic, organized account of his overall philosophy. In between fall other key works including the *New System of Nature* (1695), the *Specimen of Dynamics* (1695), *Nature Itself* (1698), and the *Principles of Nature and Grace* (1714). Also included in the volume are critical reactions to the *Discourse* and the *New System* by Leibniz's contemporaries Antoine Arnauld, Pierre Bayle, and Simon Foucher, together with Leibniz's responses. All the texts are newly translated into English for this edition and each is preceded by a summary explaining its background, structure, and content. Also containing a substantial introduction, notes, and bibliography, the volume offers a comprehensive introduction to Leibniz's philosophy.
