**Scheduling in Computer and Manufacturing Systems** Jacek Blazewicz, Klaus H. Ecker, Günter Schmidt, Jan Weglarz, 2012-12-06 Let us start with the description of the purpose of this book First we should explain how we understand its title In general scheduling problems can be understood very broadly as the problems of the allocation of resources over time to perform a set of tasks By resources we understand arbitrary means tasks compete for They can be of a very different nature e g manpower money processors machines energy tools Also tasks can have a variety of interpretations starting from machining parts in manufacturing systems up to processing information in computer systems The same is true for task characteristics e g ready times due dates relative urgency weights functions describing task processing in relation to allotted resources Moreover a structure of a set of tasks reflecting precedence constraints among them can be defined in different ways In addition different criteria which measure the quality of the performance of a set of tasks can be taken into account

Scheduling in Computer and Manufacturing Systems Jacek Blazewicz, Klaus H. Ecker, Günter Schmidt, Jan Weglarz, 1994-07-12 A theoretical and application oriented analysis of deterministic scheduling problems arising in computer and manufacturing environments The important classical results are surveyed with particular attention paid to single processor scheduling along with general models such as resource constrained scheduling flexible flow shops dynamic job shops and special flexible manufacturing systems Polynomial and exponential time optimization algorithms as well as approximation and heuristic ones are presented using a Pascal like notation before being discussed in the light of particular problems Basic concepts from scheduling theory and related fields are described to assist less advanced readers
