Scale Problems In Hydrology:

Scale Problems in Hydrology V.K. Gupta, I. Rodriguez-Iturbe, E.F. Wood, 2012-12-06 A special workshop on scale problems in hydrology was held at Princeton University Princeton New Jersey during October 31 November 3 1984 This workshop was the second in a series on this general topic The proceedings of the first workshop held in Caracas Venezuela in January 1982 appeared in the Journal of Hydrology Volume 65 1 3 1983 This book contains the papers presented at the second workshop The scale problems in hydrology and other geophysical sciences stem from the recognition that the mathematical relationships describing a physical phenomenon are mostly scale dependent in the sense that different relationships manifest at different space time scales The broad scientific problem then is to identify and formulate suitable relationships at the scales of practical interest test them experimentally and seek consistent analytical connections between these relationships and those known at other scales For example the current hydrologic theories of evaporation infiltration subsurface water transport and water sediment transport overland and in channels etc derive mostly from laboratory experiments and therefore generally apply at small space time scales A rigorous extrapolation of these theories to large spatial and temporal basin scales as mandated by practical considerations appears very difficult Consequently analytical formulations of suitable hydrologic theories at basin wide space time scales and their experimental verification is currently being perceived to be an exciting and challenging area of scientific research in hydrology In order to successfully meet these challenges in the future this series of workshops was initiated

Scale problems in hydrology, 1996 **Scale problems in hydrology. Workshop ; 2**, 1986 *Reflections in Hydrology* Nathan Buras, 1997-01-23 Published by the American Geophysical Union as part of the Special Publications Series In the early 1980s the Department of Hydrology and Water Resources at the University of Arizona started a tradition an annual public lecture to perpetuate the memory of one of its most original thinkers who passed away at an early age Chester C Kisiel At that time the department was quite young a little over ten years old and so was the University of Arizona not quite a century old The overall atmosphere was extremely stimulating faculty members and students were curious and excited wishing to learn and understand more about the natural phenomena that transform precipitation into water and the possible development of regional waters for human uses The preparation and delivery of these lectures were entrusted by the department to outstanding scientists in the fields of hydrology and water resources thus attaining a double objective On the one hand the lectures became salient points on a time trajectory when specific facets of the broad agenda of scientific issues studied in the department were brought to the limelight of a public discourse On the other hand the lectures also provided opportunities for reflection on contemporary problems and on the approaches for their study and analysis

Scale problems in hydrology. Workshop ; 1, 1983 **Scale problems in hydrology**, 1996 **Scale Problems in Hydrology**, 1983 **Scale Problems in Hydrology**, 1983 *Scale Issues in Hydrological Modelling* J. D. Kalma, M. Sivapalan, 1995-09-11 There is a growing need for appropriate models which

address the management of land and water resources and ecosystems at large space and time scales Theories of non linear hydrological processes must be extrapolated to large scale three dimensional natural systems such as drainage basins flood plains and wetlands This book reports on recent progress in research on scale issues in hydrological modelling It brings together 27 papers from two special issues of the journal Hydrological Processes The book makes a significant contribution towards developing research strategies for linking model parameterisations across a range of temporal and spatial scales The papers selected for this book reflect the tremendous advances which have been made in research into scale issues in hydrological modelling during the last ten years

Scaling Up in Hydrology Using Remote Sensing J. B. Stewart, 1996-06-24 Sealing up in Hydrology using Remote Sensing Edited by J B Stewart Institute of Hydrology UK E T Engman NASA Goddard Space Flight Center USA R A Feddes Wageningen Agricultural University The Netherlands Y Kerr Centre d Etudes Spatiales de la Biosphere France The most pressing modern environmental problems are considered to affect the entire globe For example climate change deforestation and desertification are all happening on such a large scale that they may affect the sustainability of man s future What is needed to address this question quantitatively are more reliable data on large scale land use and land use change and their impacts on water resources and climate The catch is that we are never going to be able to measure directly key hydrological and meteorological variables at enough points on the ground to give adequate description of the large areas regions and continents for which information is required The only way to get this is via large scale modelling and the development of remote sensing techniques This book brings together the presentations made at a recent workshop by experts who met to consider the problems of scaling up from local to global spatial scales and from the instantaneous satellite measurements to daily or longer time scales The authors collective views represent the state of the art of their science as seen by an active international remote sensing community and ground and planetary based measurement scientists and modellers The front cover illustration is reproduced courtesy of N Fey

Space and Time Scale Variability and Interdependencies in Hydrological Processes R. A. Feddes, 1995-08-24 This book presents the integrated contributions of hydrologists meteorologists and ecologists to the first IHP IAHS George Kovacs Colloquium in connection with the study of global hydrology and climate change The atmospheric hydrological and terrestrial components of the Earth s systems operate on different time and space scales Resolving these scaling incongruities as well as understanding and modelling the complex interaction of land surface processes at the different scales represent a major challenge for hydrologists ecologists and meteorological scientists alike This book deals with time and space scale variations with reference to several topics including soil water balance ecosystems and interaction of flow systems and macroscale hydrological modelling This book will be of great use to researchers engineers and forecasters with an interest in space and time scale variability

Susskind, 2012-07-26 Water is the resource that will determine the wealth welfare and stability of many countries in the twenty first century This book offers a new approach to managing water that will overcome the conflicts that emerge when the interactions among natural societal and political forces are overlooked At the heart of these conflicts are complex water networks In managing them science alone is insufficient and so is policy making that doesn't take science into account Solutions will only emerge if a negotiated or diplomatic approach that blends science policy and politics is used to manage water networks The authors show how open and constantly changing water networks can be managed successfully using collaborative adaptive techniques to build informed agreements among disciplinary experts water users with conflicting interests and governmental bodies with countervailing claims Shafiqul Islam is an engineer with over twenty five years of practical experience in addressing water issues Lawrence Susskind is founder of MIT's Environmental Policy and Planning Program and a leader of the Program on Negotiation at Harvard Law School Together they have developed a text that is relevant for students and experienced professionals working in a variety of engineering science and applied social science fields They show how new thinking about water conflict can replace the zero sum battles that pit experts politicians and stakeholders against each other in counter productive ways Their volume not only presents the key elements of a theory of water diplomacy it includes excerpts and commentary from more than two dozen seminal readings as well as practice exercises that challenge readers to apply what they have learned **Scale Problems in Hydrology** Ignacio Rodríguez-Iturbe, Vijay K.
