Reassessing Nuclear Power The Fallout From Chernobyl:

Reassessing Nuclear Power Christopher Flavin, 1987 The Chernobyl nuclear plant explosion on April 26 1986 was the world's most serious nuclear power accident to date This document examines the accident's impact on the world from a variety of perspectives The first major section of the book provides a step by step account of the accident itself beginning with the special testing that eventually led to the disaster Included are data on the daily release of radioactivity from Chernobyl from April 25 to May 7 the maximum reported radiation levels in Europe following the accident and the estimated direct financial losses in the Soviet Union resulting from the incident The Political Fallout section examines public opposition to nuclear power in various countries It provides a summary of both the citizen responses such as protests demonstrations and petitions and the political responses that followed the accident Other sections examine the safety of nuclear power in general and the possible effects of Chernobyl on the once held vision of a nuclear powered world Major adjustments in policy are traced in selected countries since 1980 and examples of governmental decisions to reduce or eliminate nuclear power are discussed TW *Forum for Applied Research and Public Policy*, 1990 *Nuclear Politics in America* Robert J. Duffy, 1997 The promise and peril of nuclear power have been a preoccupation of the modern age Robert Duffy now examines the politics of nuclear power over the last 50 years relating broad trends in American politics to changes in the regulation of the nuclear industry to show how federal policies in this area have been made implemented and altered **Bulletin of the Atomic Scientists**, 1987-07 Resources in Education, 1987 Conflict Over the World's Resources Robert Mandel, 1988-10-24 As resource scarcity threatens and the economic gap between affluent and poorer nations continues to widen conflict over natural resources is assuming critical dimensions Mandel analyzes the causes and consequences of present tensions and offers case studies of five recent or ongoing resource conflicts illustrating major areas of confrontation and identifying the range of policy issues we need to confront Synthesizing his findings Mandel demonstrates the need for rethinking current policy and suggests alternative approaches that may help to reduce international conflict The author first describes worldwide scarcity trends and trends in resource conflict and their relation to international conflict as a whole He looks at the dynamics of resource competition assessing the impact of scarcity declining economic development environmental awareness resource interdependence and other factors The first case study centering on the protection of an endangered species examines the whaling confrontation that began in 1972 The oil crisis and the continuing conflict over fossil fuels is considered next Other case studies focus on political coercion in the conflict over food the scarcity of strategic minerals and competition to control them and the conflict arising from nuclear pollution in the wake of the Chernobyl disaster The concluding chapter dealing with policy implications explains why prevailing attitudes toward resources are counterproductive and suggests ways of working more effectively to minimize international resource conflict Combining solid empirical analysis with a thorough understanding of environmental theory and comparative resource issues Mandel's study
