Recent Advances In Nervous System Toxicology:

Recent Advances in Nervous System Toxicology Corrado L. Galli, Luigi Manzo, Peter S. Spencer, 2012-12-06 This volume addresses some facets of the adverse actions of chemical agents on the central and peripheral nervous systems in developing and mature states Some of the effects of these chemicals are short lasting and rapidly reversible others especially those that cause structural damage to the nervous system may result in permanent damage to the organism The nervous system has several levels of vulnerability to toxic substances Some substances perturb ion channels or synaptic mechanisms required for the orderly transfer of electrochemical information within the nervous system Others disrupt sites required for the maintenance of cellular integrity and these variably result in degenerative responses of neurons and myelinating cells Further sites of vulnerability include the delicate neural vasculature and neurohumeral mechanisms responsible for physiological homeostasis The science of neurotoxicology inevitably is a multidisciplinary endeavor with contributions from biochemistry physiology morphology and behavior to name a few The challenge is to apply appropriate techniques to investigate neurotoxic phenomena The first logical step in this analysis is to determine from the point of view of the nervous system the nature of the exposure Is the chemical a single or multiple entity is it metabolized how does it gain access to neural tissue Once these factors are understood changes induced by the exposure can be described at various levels from the biochemical to the behavioral

Dove,1986-05-31 One landmark in the long history of biological studies on the slime mold Physarum polycephalum was the introduction of chemically defined growth conditions for the plasmodial phase of this organism in the laboratory of Harold P Rusch in Wisconsin in the 1950s A number of investigators began working with Physarum in that era then dispersed over the world In the 1950s to 1960s the regular meetings of Physarum workers in North America were commonly held in Wisconsin Strong new scientific initiatives in Physarum have grown up independently from the disciplines of genetics cytology photo biology and biophysics in countries scattered over the world from Japan to Poland Germany France the Netherlands Norway Spain Turkey and Great Britain Infusion of the technical power of contemporary molecular biology in particular gene cloning and monoclonal antibodies has brought these dispersed investigators into mutual communication It was therefore timely and appropriate to assemble the Physarum community again in Wisconsin after a hiatus of 20 years at a conference in the Friedrich Conference Center at the University of Wisconsin Madison from July 8 to 13 1985
