The evolution of financial systems

In precolonial societies, finance was largely concerned with the development of a medium of exchange. Barter was inefficient, transactions costs were high, and the lack of a medium of exchange limited the extent of the market and the opportunities for specialization. With the growth of regional trade, the development of payment media became linked to the financing of trade. Differences apart from the financing of governments and national trade, borrowing and lending were mostly bilateral and on a small scale.

The spread of urban society, and above all the advent of large-scale industrialization in the second half of the nineteenth century, altered the role that finance had to play. Finance was now concerned with mobilizing resources for large infrastructure projects and for businesses with heavy capital requirements that exceeded the capabilities of small equity firms.

The systems that emerged often suffered from local and mismanagement. They proved unreliable and experienced frequent crises. Speculation was rampant, fueled by financial innovations, rapid expanding markets, and after the Great Depression of the 1930s governments began to regulate their financial systems more closely. But governments' intervention was by no means entirely successful. It made the financial system less brittle, and although it reduced fraud it did not eliminate it. Moreover, economic agents proved adept at get-

ting around the regulations. In recent years the focus has shifted back to deregulation, partly in response to financial innovation and partly in pursuit of competition and efficiency.

The evolution of financial systems ought to cast light on two questions that are of interest to policy-makers in developing countries. What role should financial systems play in promoting industrialization and development? And what role should governments play in creating such systems?

Development of payment systems

The search for an efficient medium of exchange gradually led to the monetization of primitive markets. As a result the payment medium became simpler and safer. The new media facilitated trade and provided a store of value and a unit of account. Governments played an important part in this change by issuing and regulating notes and thus ensuring the quality and acceptability of coins, but they were also frequently responsible for deflating crises by lowering their weight or adulterating them with less precious metals, such as copper.

Metallic payment was a big step forward. Creditably, however, paper-based instruments, which were cheaper and more convenient, came to replace coins and buttons. Payment systems, letters of credit, and negotiable bills of exchange evolved
