Realizing Controllable Quantum States - Proceedings Of The International Symposium On Mesoscopic Superconductivity And Spintronics - In The Light Of Quantum Computation Junsaku Nitta,Hideaki Takayanagi,2005-08-02

This volume is a collection of papers from the third meeting of the international symposium on mesoscopic superconductivity and spintronics Research on quantum information technology has advanced a great deal since the previous meeting Mesoscopic physics such as spins in nano scale semiconductor structures micro fabricated superconducting junctions and extraordinary metal contacts have now been not only theoretically but also experimentally established as important solid state elements of quantum information devices The book also contains some papers on information theory from the viewpoint of quantum algorithms indicating that further collaboration between physics and computer science promises to produce fruitful results in quantum information technology

Communication Shock Ty Adams,Steve Smith,2015-09-04 In the spirit of Alvin Toffler s acclaimed works peering into the future of the technological society *Communication Shock* is a concise history of communication technologies and an exploration of the possible social and human impacts of nanotechnology on the ecology of human communication As we become increasingly more networked with communication technologies we must come to understand and confront the social impact of these changes More importantly we must wisely choose in embracing or rejecting these technologies and exploring how we might do both by striking an appropriate balance Grounded in communication theory and praxis *Communication Shock* brings some objectivity to the discussion of technology maps its development and encourages a rational conversation about its potential problems and promise It challenges readers to reach their own conclusions about the future imagined and unimaginable about the fundamental values in conflict and how one might choose to embrace or contest them to maintain individual autonomy in the face of increasingly ubiquitous marketing and technological change Present and emerging communications technologies hold the promise for a bold new future but they also have their inherent risks and drawbacks *Communication shock* is the human response conscious or unconscious wherein the individual chooses to resist the growing pervasiveness of technology in his or her life by seeking ways to reduce or redirect new technologies or to reject the addition of such technologies altogether Here is a framework for understanding the potential of the evolving technologies determining which are essential and which are distractions from the life that one believes to be meaningful and making informed choices for the life one wishes to live

Ezhov, Gennady P. Berman, 2003 This is a first introductory book in Quantum Neural Technology a new and promising area of informatics Combination of the ideas from quantum computing and neural computing raises the possibility of dramatically decreasing the complexity of neural systems by replacing networks of classical neurons with a single quantum neuron In the first two chapters the fundamentals of neural technologies and of quantum computing are presented In the third chapter it is outlined how the problems typical for classical neural technology can be solved by using quantum neural technology This book is very useful to students teachers researchers and engineers who are working in informatics or just interested in being briefly aware of it *Zeitschrift Für Naturforschung* ,2004 **Solid-State Chemistry of Inorganic Materials V: Volume 848** Materials Research Society.
