The Role of Working Memory and Executive Function in Communication under Adverse Conditions Mary Rudner, Carine Signoret,2016-06-20

Communication is vital for social participation. However, communication often takes place under suboptimal conditions. This makes communication harder and less reliable, leading at worst to social isolation. In order to promote participation, it is necessary to understand the mechanisms underlying communication in different situations. Human communication is often speech-based, either oral or written, but may also involve gesture, either accompanying speech or in the form of sign language. For communication to be achieved, a signal generated by one person has to be perceived by another person, attended to, comprehended, and responded to. This process may be hindered by adverse conditions, including factors that may be internal to the sender (e.g., incomplete or idiosyncratic language production) or occur during transmission (e.g., background noise or signal processing) or be internal to the receiver (e.g., poor grasp of the language or sensory impairment). The extent to which these factors interact to generate adverse conditions may differ across the lifespan. Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity, including efficient working memory and executive abilities such as updating and inhibition. Further, frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension. To date, less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions. It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind, updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long-term memory. Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long-term memory. It is likely that the episodic buffer plays a key role in communication under adverse conditions. The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions, including empirical and theoretical approaches. This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and/or the role of cognition in communication. As such, this topic belongs firmly within the field of Cognitive Hearing Science. Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan. Such exchange is the forerunner of broader dissemination of results, which ultimately may make it possible to take measures to reduce adverse conditions, thus facilitating communication. Such measures might be implemented in relation to the built environment, the design of hearing aids, and public awareness.

**The Oxford Handbook of Reference**  
Jeanette Gundel, Barbara Abbott, 2019-02-14. This handbook presents an overview of the phenomenon of reference, the ability to refer to and pick out entities, which is an essential part of human language and cognition. In the volume's 21 chapters, international experts in the field offer a critical account of all aspects of reference from a range of theoretical perspectives.

Chapters in the first part of the book are concerned with basic questions related to different types of referring expression and their interpretation. They address questions about the role of the speaker including speaker intentions and of the addressee as well as the role played by the semantics of the linguistic forms themselves in establishing reference. This part also explores the nature of such concepts as definite and indefinite reference and specificity and the conditions under which reference may fail. The second part of the volume looks at implications and applications with chapters covering such topics as the acquisition of reference by children, the processing of reference both in the human brain and by machines. The volume will be of interest to linguists in a wide range of subfields including semantics, pragmatics, computational linguistics and psycho and neurolinguistics as well as scholars in related fields such as philosophy and computer science.

**The Effect of Task Difficulty Upon Referential Communication** Raina Sotsky, 1975

**Humans as Self-Constructing Living Systems** Martin E. Ford, Donald H. Ford, 2019-03-04. Originally published in 1987, the purpose of this companion volume to Donald Ford's 1987 *Humans as Self-Constructing Living Systems: A Developmental Perspective on Personality and Behavior* was to illustrate the potential utility of the Living Systems Framework (LSF) for stimulating new theoretical advances for guiding research on human behavior and development and for facilitating the work of the health and human service professions. Although not exactly a how-to manual, it does provide many concrete examples of how and when the framework can be used to guide scholarly and professional activities. It also provides a concise overview of the framework itself that can help those who have read the theoretical volume refresh their memory and assist those who have not in understanding the basic concepts of the LSF and in deciding whether and how the framework might be useful to them.

**A Comparison of Requests for Information Used by Adults in a Referential Communication Task with Preschoolers** Jacquelyn Patricia Bertrand, 1987

*Intellectual Teamwork* Jolene Galegher, Robert E. Kraut, Carmen Egido, 2014-01-14. This book seeks to establish an interdisciplinary applied social scientific model for researchers and students that advocates a cooperative effort between machines and people. After showing that basic research on social processes offers much needed guidance for those creating technology and designing tools for group work, its papers demonstrate the mutual relevance of social science and information system design and encourage better integration of these disciplines. This comprehensive collection closely examines the variety of electronic tools being deployed to solve traditional problems in communication and coordination. Unfortunately, research shows that these tools have not been as successful as their designers had envisioned, partially because they were not always produced with the needs and goals of their human users in mind. The editors' goal is to entice more social scientists to orient their research around questions of practical interest to information system designers and to convince designers to search for the knowledge about social and organizational behavior that would make their tools more useful.
