Membrane Structures Volume 1:

Structure and Properties of Cell Membrane Structure and Properties of Cell Membranes Gheorghe Benga, 2018-01-18

This book provides in depth presentations in membrane biology by specialists of international repute. The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes, the role they play in cellular physiology and cell-cell interactions, and the alterations leading to abnormal cells. Illustrations, tables, and useful appendices complement the text. Those professionals actively working in the field of cell membrane investigations, as well as biologists, biochemists, biophysicists, physicians, and academicians will find this work beneficial.

Progress in Biophysics and Molecular Biology J. A. V. Butler, D. Noble, 2014-05-18. *Progress in Biophysics and Molecular Biology* Volume 32 summarizes the significant progress that has been made in the fields of biophysics and molecular biology. Topics range from metabolic regulation and transfer RNA to cellular metabolism and prokaryotic and eukaryotic ribosomes. This volume consists of five chapters and begins with a discussion of mathematical models used in the study of metabolic regulation, with emphasis on the energy metabolism of eukaryotes. The next chapter examines the possible functions of transfer RNA, minor components, paying particular attention to the principle of location function relationships. The reader is also introduced to spatial functional correlations in cellular metabolism and highlights the role of organized multienzyme systems along with the fundamentals of ribosome structure and function in prokaryotes and eukaryotes. A chapter that analyzes the structures and functions of transfer RNA concludes the book. This book will be of interest to scientists, students, and researchers working in the fields of biophysics and molecular biology.

The Enzymes of Biological Membranes A.N. Martonosi, 2012-07-15. In the first edition of *The Enzymes of Biological Membranes* published in four volumes in 1976, we collected the mass of widely scattered information on membrane-linked enzymes and metabolic processes up to about 1975. This was a period of transition from the romantic phase of membrane biochemistry, preoccupied with conceptual developments and the general properties of membranes, to an era of mounting interest in the specific properties of membrane-linked enzymes, analyzed from the viewpoints of modern enzymology. The level of sophistication in various areas of membrane research varied widely: the structures of cytochrome c and cytochrome b₅ were known to atomic detail, while the majority of membrane-linked enzymes had not even been isolated. In the intervening eight years, our knowledge of membrane-linked enzymes expanded beyond the wildest expectations. The purpose of the second edition of *The Enzymes of Biological Membranes* is to record these developments. The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes. In the second volume, the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed. The third and fourth volumes review recent developments in active transport, oxidative phosphorylation, and photosynthesis.

Dynamic Structure of Detonation in Gaseous and Dispersed Media A.A. Borissov, 2012-12-06. Of late, the demands of industry in creating new composite and functional

materials with present properties stimulated an increased interest to the investigation of processes which occur in the detonation technologies of complex chemical composition with an additive of disperse particles The collection includes a series of papers presented at the 3d International Conference Lavrentyev Readings on Mathematics Mechanics and Physics Novosibirsk 1990 was held by the Hydrodynamics Institute under the support of the Presidium of the Siberian Branch of the USSR Academy of Sciences to stimulate the international cooperation of the leading international centers In the framework of this Conference the Round Table seminar was held by Prof A Borissof and Prof V Mi trofanov devoted to Dynamic Structure of Detonation in Gaseous and Dispersed Media The idea to hold such Round Table was supported by Chairman of Organizing Committee academician Prof V Titov from Hydrodynamics Institute and academician Prof V Nakoryakov and also his Institute of Thermophysics The main ideas discussed at the Round Table were presented in the form of papers which reflected present situation of the problem of dynamic structure of the detonation waves in gaseous and dispersed media The basic experimental facts concerning of complicated mul ti dimensional non stationary structure both of the detonation wave and its front surface generation of the cell structure the effect of transverse waves obstacles channel geometry etc on the transition from dynamic regime to stationary structure are represented in the fist three papers

Aloia,Cyril C. Curtain,Larry M. Gordon,1991-02-19 This volume presents a thorough analysis of the current theories of action of anaesthetics and other amphiphathic molecules It concentrates on aspects of how such molecules interact with the membranes of the central nervous system thereby producing the anaesthetic state The authors discuss the multiple anaesthetic binding sites within the membrane and their relationship to the chemical composition of the membrane and the unique structure of the drug molecule
