## **Pathology Of Eating:**

**Pathology of Eating (Psychology Revivals)** Sara Gilbert, 2013-10-01 Originally published in 1986 Sara Gilbert provided the first systematic and comprehensive coverage of the psychological aspects of eating disorders and their treatment The book begins with an account of normal eating behaviour and the problems of explaining its control in the individual in the context of social and cultural influences It describes cross cultural differences in attitudes to being overweight or underweight and the current western dilemma of pressures towards slimness on the one hand and the increasing demand for choice and fast food on the other In Part II the author describes the phenomena of overeating and undereating both in relation to people with systemic disease and in people suffering from obesity anorexia nervosa and bulimia She examines the psychological causes of overeating and undereating and the problems of drawing a line between purely medical and purely social psychological explanations In Part III of the book the author provides a summary of treatments for overeating and undereating with emphasis on the psychological approaches She describes new developments in particular in the use of behavioural techniques and their significance as a means of allowing individual sufferers some choice in the course of their own treatment

*Examining the Structure of Eating Pathology Through Scale Construction* Kelsie Terese Forbush, 2011 Eating disorders are alarmingly prevalent and potentially lethal The proper assessment of eating disorder symptoms is therefore crucial for the early identification and treatment of those suffering from these serious illnesses Current measures of eating disorder symptoms are either very narrow in scope e g assess only one aspect of disordered eating such as bingeing and or have one or more serious limitations such as inconsistent factor structures and or poor discriminant validity Because several of the existing measures of eating disorders were created over 20 years ago many of these limitations are the direct result of out dated scale development methods and testing The goal of this study was to determine the structure underlying the symptoms of eating disorders and develop a multidimensional measure of eating pathology based on this structure To accomplish this goal an initial item pool was

developed to assess 20 dimensions of eating pathology The initial item pool of 160 items was administered to a student sample N 433 and community sample N 407 to determine the preliminary structure of the measure using exploratory and confirmatory factor analyses The revised measure was then administered to independent samples of psychiatric patients N 190 and students N 227 Exploratory and confirmatory factor analyses revealed a 7 factor structure that showed excellent convergent and discriminant validity The final measure was also internally consistent median coefficient alphas ranged from .84-.89 and reliable over a two to four week period  $r$ 's ranged from .70-.84 The current study represents one of perhaps the most comprehensive scale development project ever conducted in the field of eating disorders and is expected to improve future basic and treatment research focused on eating disorders
