ECAI 2006 Silvia Coradeschi,Anna Perini,Paolo Traverso,2006-08-15 In the summer of 1956 John McCarthy organized the famous Dartmouth Conference which is now commonly viewed as the founding event for the field of Artificial Intelligence During the last 50 years AI has seen a tremendous development and is now a well established scientific discipline all over the world Also in Europe AI is in excellent shape as witnessed by the large number of high quality papers in this publication In comparison with ECAI 2004 there s a strong increase in the relative number of submissions from Distributed AI Agents and Cognitive Modelling Knowledge Representation Reasoning is traditionally strong in Europe and remains the biggest area of ECAI 06 One reason the figures for Case Based Reasoning are rather low is that much of the high quality work in this area has found its way into prestigious applications and is thus represented under the heading of PAIS

Computational Mechanics '86 Genki Yagawa,Satya N. Atluri,2013-11-11 It is often said that these days there are too many conferences on general areas of computational mechanics mechanics and

numerical methods while this may be true the history of scientific conferences is itself quite short According to Abraham Pais in *Subtle is the Lord* Oxford University Press 1982 p 80 the first international scientific conference ever held was the Karlsruhe Congress of Chemists 3 5 September 1860 in Karlsruhe Germany There were 127 chemists in attendance and the participants came from Austria Belgium France Germany Great Britain Italy Mexico Poland Russia Spain Sweden and Switzerland At the top of the agenda of the points to be discussed at this conference was the question Shall a difference be made between the expressions molecule and atom Pais goes on to note The conference did not at once succeed in bringing chemists closer together It is possible that the older men were offended by the impetuous behavior and imposing manner of the younger scientists see references cited in Pais book It may be observed that history in general repeats itself However at ICCM 86 in Tokyo roughly 500 participants from both the West and the East were in attendance there were only scholarly exchanges the young tried to learn from the more experienced and a spirit of international academic cooperation prevailed

Cowley,1904 **Lane Sensing and Path Prediction for Preventing Vehicle Road-departure Accidents** Chiu-Feng Lin,1995 Neural Probabilistic Path Prediction Bowen Peng,2022 Path tracing is one of the most popular Monte Carlo methods used in computer graphics to solve the problem of global illumination A path traced image is

much more photorealistic compared to standard rendering methods such as rasterization and even ray tracing Unfortunately path tracing is expensive to compute and slow to converge resulting in noisy images when unconverged Many methods aimed to accelerate path tracing have been developed but each has its own downsides and limitations Recent advances in deep learning especially with conditional generative models have shown to be very capable at learning modeling and sampling from complex distributions As path tracing is also dependent on sampling from complex distributions we investigate the similarities between the two problems and model the path tracing process itself as a conditional generative process It can then be used to build an efficient neural estimator that allows us to accelerate rendering time with as few assumptions as possible We show that our neural estimator NPPP used along with path tracing can improve rendering time by a considerable amount without compromising much in rendering quality The estimator is also shown to be very flexible and allows a user to control and prioritize quality or rendering time without any further training or modifications to the neural network
