

Layout & Physical Facilities for Medicine Store

Hospital pharmacy is one of the most important departments among the several departments of the hospital. Hospital pharmacy may be defined as that department of the hospital which deals with procurement, storage, compounding, dispensing, manufacturing, testing, packaging and distribution of drugs.

Designing a Drug Store

Designing a drugstore needs to provide both convenience for the people working there and those shopping there. The layout must be welcoming, have inviting department colors, convenient navigation and easy-to-identify signage. The pharmacy must provide a complete shopping experience for customers, including health aids ranging from prescriptions to toiletries.

Location and layout of the Hospital Pharmacy

- It should be located in hospital premises so that patients and staff can easily approach it. In multi- storied building of the hospital, the pharmacy should be preferably located on the ground floor especially the dispensing unit.
- Outpatient pharmacy should give pleasant appearance and must have enough space for seating of patients who have to wait for medicines. It should have educational posters on the health and hygiene and light literature for reading.
- Space must be provided for routine manufacturing of stock solution, bulk powder, ointments etc. The manufacturing room should be adjacent to the pharmacy.
- Medical stores of a pharmacy should be adjacent to the pharmacy itself or should be directly connected to pharmacy. Pharmacy receives materials from two sources:

1. Medical stores
2. Manufacturing division of the hospital
