Redesigning the Molecules of Life Steven A. Benner, 2012-12-06 The organic chemist is rarely satisfied by a simple explanation of the reactivity of organic molecules Rather the chemist wants to go one step further to control the behavior of molecules by altering their structure in a controlled way This is in fact a rather stringent definition of understanding as it requires the prediction of behavior from structure or structure from behavior But it also places technical demands on the chemist He must be able to synthesize the molecules he studies characterize them at the atomic level of structural resolution and then measure their behaviors to the precision that his explanation demands Biological chemistry presents special problems in this regard Although the tools for synthesis purification and structural characterization are now available for manipulating rather large biological macromolecules proteins and nucleic acids in particular the theory supporting these manipulations is inadequate We certainly do not know enough to control generally the behavior of biological macromolecules still worse it is not clear that we know enough to design synthetic molecules to expand our understanding about how reactivity in such biological macromolecules might be controlled Starting from scratch there are simply too many oligopeptides to make starting from native proteins there are simply too many structural mutations that might be introduced
