*Perspectives on Development and Population Growth in the Third World* O.G. Simmons, 2012-12-06 Until the early to mid 1970s social scientists in the fields of population and development were largely going their own ways Demographers relied almost exclusively on demographic transition theory as their paradigm for understanding the role of development in population change and fertility decline Conversely most development economists and other specialists were certainly aware of the constraints placed upon development objectives by population growth However the main development theories paid little attention to population and the implications of

population growth for development Indeed it was not until after the World Population Conference in Bucharest in 1974 that the interaction of population and development became a serious and positive theme for social scientific study Accordingly since about the mid 1970s an extensive literature in the field of population and development has been generated And in 1975 under the auspices of The Population Council the journal Population and Development Review was founded a journal which in the past decade has developed into the premier publication in the world for work in this area But our understanding of development as it refers to change in Third World countries remained fragmented Moreover our understanding of the linkages and interactions between population and development was very limited It is in this regard that Ozzie Simmons's Perspectives on Development and Population Growth in the Third World will certainly have an impact Critical Perspectives on Schooling and Fertility in the Developing World National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Population, 1999-01-11 This volume assesses the evidence and possible mechanisms for the associations between women's education fertility preferences and fertility in developing countries and how these associations vary across regions It discusses the implications of these associations for policies in the population health and education sectors including implications for research

**Reproductive Behavior in Muslim Countries** Mehtab S. Karim,1997

**Women's Status and Fertility in Developing Countries** Mead Cain,1984 The relationship between women s status which is defined in terms of the degree to which they are economically dependent on men and fertility in developing countries is examined The paper adopts a particular theoretical perspective regarding fertility determinants and explores the implications of women s status within that context This perspectives gives special attention to the value of children as security assets in settings where public welfare assistance is minimal or non existent and financial and insurance markets are poorly developed In this context women s economic status and the institutional factors that create a degree of dependence determine the relevance of sex of children in defining security goals High dependence results is defining security goals in terms of surviving sons Given similar security needs and other things being equal fertility will be considerably higher in settings where there is a strong preference for sons than in settings where son preference is weak A cross national empirical analysis is presented that supports this argument

**Women's Status and Fertility in Developing Countries** Bryan L. Boulier,Mead Cain,Rodolfo A. Bulatao,1983

**Fragmented Families, Poverty, and Women's Reproductive Narratives in South Africa** Kammila Naidoo,2009 Fragmented Families addresses a central question in the demographic debates on poverty and fertility transition in southern Africa In what ways do women s recurrent encounters with poverty serve to shape their sexual unions social relationships and reproductive practices The book focuses on the lives of a group of mothers and daughters from fifteen families in a demarcated part of the Winterveld area in South Africa and draws attention to historical socio cultural political and economic concerns in order to place in context or make sense of reproductive dynamics and family life at the micro level Vignettes drawn from fieldwork highlight the particularities of the area the persistence of historical tensions diverse livelihoods and complex gender relationships The intergenerational stories of the women suggest that they live with immense and increasing adversity and that strategies to contend with them sometimes include attempts to assert control over sexual encounters and reproductive outcomes The book contributes to a continuing debate on how changing socio economic conditions could influence prospects for and the nature of fertility transition in African countries The study concurs with alternative arguments that shifts toward lower levels of fertility might be due in certain contexts to experiences of severe hardship rather than favourable economic circumstances Instead of seeking security and risk aversion through bearing many children the response of indigent women in this area has been largely to resist reproduction at particular stages of their lives whilst using sexual relationships and child bearing as strategies to manipulate and secure resources In reflecting on methodological approaches the book draws attention to the limitations of survey research in efforts to elicit accurate representations of reproductive behaviour and fertility preferences and emphasises the usefulness of more engaged

qualitative and long term fieldwork endeavours in building substantive insights on women s familial and reproductive lives

*Brazil, an Analysis of Reproductive Behavior in Brazil* Nelson do Valle Silva,1990      *The Fertility Transition in Latin America* José Miguel Guzmán,1996

The 1960s saw the start of sustained process of declining fertility in Latin America based on radical change in the reproductive patterns of families There has been a clear trend towards more or less generalized behaviour of regulating fertility coincident with a rise in the availability and the use of methods of contraception There are however important differences between and within the countries of the region which are analysed in full in this volume Whether one stratifies by demographic factors place of residence education or social status from the beginning of the transition it seems that a variety of reproductive patterns were in existence This volume studies the process of transition from high to low fertility as it has occurred and is occurring in Latin America It provides a general comparative overview of transition in the region in which the link between socio economic development and declining fertility is explored There are sections on the process through which the transition occurs social determinants of fertility change and the consequences of fertility decline Large data sets from census and survey results for many countries and points in time are presented in over 150 tables and figures The comparative analyses are complemented by five individual country studies in the final section
