

# Psych 2

## Research Methods

---

First an overview of the scientific method generally. Then, an exploration of experimental and descriptive/correlational methods.

---

### Scientific Method

#### Goals of the scientific enterprise

1. **Measurement and description:** Develop ways to measure the phenomena under study.
  - a. **OPERATIONALIZATION:** Clearly defining actions used to measure a variable ("Waking up early will make you happy"... What is *early*? (6 AM? 7 AM?) What is *happy*? (number of smiles? Dopamine levels? Self reporting?)
2. **Understanding and prediction:** Explain the reasons for the occurrence of events.
  - a. **Hypothesis:** Tentative statement about the relationship between two variables
  - b. **Variables:** Measurable conditions, events, characteristics, or behaviors that are controlled or observed in a study.
3. **Application and control:** use research to solve practical problems.

#### Steps in a scientific experiment

1. **Formulate a testable hypothesis:** Must be formulated precisely with clearly defined variables.
  - a. Variables are operationally defined when their measurements and controls are clearly defined.
  - b. Must be **falsifiable:** There is a possibility that it can be wrong. A researcher might say that all of the statements of Nostradamus either (1) became true or (2) haven't happened yet. They may consider their hypothesis proven correct, but the design of their research method was never really falsifiable.
2. Select research methods and design the study.
3. Collect the data.
4. Analyze the data and draw conclusions.
5. Report the findings.
