**Photosynthesis: Structures, Mechanisms, and Applications** Harvey J.M. Hou,Mohammad Mahdi Najafpour,Gary F. Moore,Suleyman I. Allakhverdiev,2017-05-16 To address the environmental socioeconomic and geopolitical issues associated with increasing global human energy consumption technologies for utilizing renewable carbon free or carbon neutral energy sources must be identified and developed Among renewable sources solar energy is quite promising as it alone is sufficient to meet global human demands well into the foreseeable future However it is diffuse and diurnal Thus effective strategies must be developed for its capture conversion and storage In this context photosynthesis provides a paradigm for large scale deployment Photosynthesis occurs in plants algae and cyanobacteria and has evolved over 3 billion years The process of photosynthesis currently produces more than 100 billion tons of dry biomass annually which equates to a global energy storage rate of 100 TW Recently detailed structural information on the natural photosynthetic systems has been acquired at the molecular level providing a foundation for comprehensive functional studies of the photosynthetic process Likewise sophisticated spectroscopic techniques have revealed important mechanistic details Such accomplishments have made it possible for scientists and engineers to construct artificial systems for solar energy transduction that are inspired by their biological counterparts The book contains articles written by experts and world leaders in their respective fields and summarizes the exciting breakthroughs toward understanding the structures and mechanisms of the photosynthetic apparatus as well as efforts toward developing revolutionary new energy conversion technologies The topics chapters will be organized in terms of the natural sequence of events occurring in the process of photosynthesis while keeping a higher order organization of structure and mechanism as well as the notion that biology can inspire human technologies For example the topic of light harvesting will be followed by charge separation at reaction centers followed by charge stabilization followed by chemical reactions followed by protection mechanisms followed by other more specialized topics and finally ending with artificial systems and looking forward As shown in the table of contents TOC the book includes and integrates topics on the structures and mechanisms of photosynthesis and provides relevant information on applications to bioenergy and solar energy transduction

**Infrastructure Policy and Inequality** Michael A. Cohen,2024-04-04 This book reframes the purpose of infrastructure from being an input to economic growth to becoming a major instrument in reducing socioeconomic inequalities in both industrialized and developing countries Drawing on global and national lessons of COVID 19 and extensive working experience in 55 countries this book reviews infrastructure policies and performance over several decades and suggests that the underperformance of infrastructure could be improved by more attention to users and the demand side and thereby contribute to overcoming many obstacles facing low income communities around the world This

book argues that growth is not a necessary condition for sustainability or social justice and that both are undermined by structural inequalities which reduce the income and opportunities of urban households More focus on user needs can substantially change the distribution of benefits and the quality of living conditions of low income people It provides a unique theoretical and on the ground critique of conventional infrastructure practices while illustrating to readers the many positive experiences around the world More infrastructure is not enough different and better is needed This book reviews World Bank experience in launching a 30 year program to alleviate urban poverty through some 7 000 projects showing that many significant policy changes have led to a big improvement in global urban policies adopted by national and local governments yet have failed to significantly address and reduce intra urban inequalities The audience for this book includes academics both faculty and advanced graduate students while also a wider public interested in the prospects for international development
