Epilepsy

by WILLIAM PRYSE-PHILLIPS, M.D., 96 pp., ill., Williams & Wilkins Co., Baltimore, 1969. \$6

In this slim paperback volume the author has attempted the formidable task of presenting all aspects of epilepsy in less than 90 pages. The volume consists of 10 chapters and includes discussions of neurophysiology in 3 pages, the behavioral manifestations of seizures in 10 pages, the use of anticonvulsant drugs in 15 pages, and social and psychiatric management in 15 pages. A separate chapter by Bayliss on "The EEG and Diagnosis" occupies 23 pages.

In appraising this volume, I must commend the author for producing a text which, on the whole, is free of serious error. Nevertheless, he is ingenuous in attempting a discussion of the pathophysiology of epilepsy in 3 pages, in which modern terms such as "hypersynchrony" and "inhibitory mechanisms" add little to Hughlings Jackson's one-sentence definition. Similarly, his attempts at a "synthesis" of classification may confuse the student. He has modified a recent proposal for classification by dividing all epilepsies into two types. Type 1, which in general corresponds to the classification "seizures generalized from the onset," is variously described as "centrencephalic," "cryptogenic," or "idiopathic." Thus he mixes the behavioral manifestations of seizures and their causes. This confusion is best exemplified by his inclusion of infantile spasms in his type 1 epilepsy. In some instances these seizures represent the response of an immature brain to diffuse or multifocal disease; hence, neither are they necessarily idiopathic nor do they have anything to do with the centrencephalon.

Inevitably this work will invite comparison

with the recent volume of Schmidt and Wilder. In its comprehensiveness, depth of presentation, and rigorousness, the latter volume appears far superior. One might have been tempted to recommend this as a handy introduction for medical students were it reasonably priced. I am puzzled as to how the publishers justify a paperback publication costing more than 6 cents per page.

Clinical Pathology in Mental Retardation

by R. D. EASTHAM, M.D., and J. JANCAR, M.B., 353 pp., ill., Williams & Wilkins Company, Baltimore, 1968. \$13.25

As stated by the authors, the book is intended for individuals interested in mental retardation and physical maldevelopment and is the result of the collaboration of ideas between a psychiatrist and a clinical pathologist.

Biochemical abnormalities of amino acid, lipid, carbohydrate, and endocrine metabolism are discussed primarily from the laboratory investigator's point of view. The current research in these fields is well documented and thorough.

The clinical or clinicopathological descriptions are vague and difficult to appreciate. This is particularly true of those sections in which a description of a clinical finding is made, where the authors would have done much better to have included photographs.

In short, this book is mostly a compendium of facts and details of rare diseases of a chemical sort; it does not serve the purpose for the neurologist who appreciates thinking in broader terms of pathogenesis, etiology, mechanisms, clinical features, and course.
