Pattern Recognition: From Classical To Modern Approaches Sankar Kumar Pal, Amita Pal, 2001-11-23
This volume containing contributions by experts from all over the world is a collection of 21 articles which present review and research material describing the evolution and recent developments of various pattern recognition methodologies ranging from statistical syntactic linguistic fuzzy set theoretic neural genetic algorithmic and rough set theoretic to hybrid soft computing with significant real life applications. In addition the book describes efficient soft machine learning algorithms for data mining and knowledge discovery. With a balanced mixture of theory algorithms and applications as well as up to date information and an extensive bibliography *Pattern Recognition From Classical to Modern Approaches* is a very useful resource.

[Neural Networks In Pattern Recognition And Their Applications](#) Chi Hau Chen, 1991-12-27
The revitalization of neural network research in the past few years has already had a great impact on research and development in pattern recognition and artificial intelligence. Although neural network functions are not limited to pattern recognition there is no doubt that a renewed progress in pattern recognition and its applications now critically depends on neural networks. This volume specially brings together outstanding original research papers in the area and aims to help the continued progress in pattern recognition and its applications.

[Artificial Neural Networks in Pattern Recognition](#) Luca Pancioni, Friedhelm Schwenker, Edmondo Trentin, 2018-08-29
This book constitutes the refereed proceedings of the 8th IAPR TC3 International Workshop on Artificial Neural Networks in Pattern Recognition ANNPR 2018 held in Siena Italy in September 2018. The 29 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 35 submissions. The papers present and discuss the latest research in all areas of neural network and machine learning based pattern recognition. They are organized in two sections: learning algorithms and architectures and applications. Biometrics David D. Zhang,2013-11-11 Biometrics based authentication and identification are emerging as the most reliable method to authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature palmprint iris hand voice and face that can be used to authenticate a person s identity or establish an identity from a database With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently there are over ten different biometrics systems that are either widely used or under development Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications However very few books are exclusively devoted to such issues of automated biometrics Automated Biometrics Technologies and Systems systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security

Bifurcation Theory and Spatio-Temporal Pattern Formation Wayne Nagata, Navaratnam Sri Namachchivaya, 2006-10-03. Nonlinear dynamical systems and the formation of spatio-temporal patterns play an important role in current research on partial differential equations. This book contains articles on topics of current interest in applications of dynamical systems theory to problems of pattern formation in space and time. Topics covered include aspects of lattice dynamical systems, convection in fluid layers with large aspect ratios, mixed mode oscillations and canards, bacterial remediation of waste, gyroscopic systems, data clustering and the second part of Hilbert's 16th problem. Most of the book consists of expository survey material and so can serve as a source of convenient entry points to current research topics in nonlinear dynamics and pattern formation. This volume arose from a workshop held at the Fields Institute in December of 2003 honoring Professor William F. Langford's fundamental work on the occasion of his sixtieth birthday. Scientific and Technical Aerospace Reports, 1985. *Neurocomputing* Françoise Fogelman Soulie, Jeanny Herault, 2012-12-06. This volume contains the collected papers of the NATO Conference on Neurocomputing held in Les Arcs in February 1989. For many of us, this conference was reminiscent of another NATO Conference in 1985 on Disordered Systems 1, which was the first conference on neural nets to be held in France. To some of the participants, that conference opened in a way the field of neurocomputing, somewhat exotic at that time, and also allowed for many future fruitful contacts. Since then, the field of neurocomputing has very much evolved and its audience has increased so widely that meetings in the US have often gathered more than 2000 participants. However, the NATO workshops have a distinct atmosphere of free discussions and time for exchange, and so in 1988 we decided to go for another session. This was an occasion for me and some of the early birds of the 1985 conference to realize how much and how little too the field had matured.
