Melter,Azriel Rosenfeld,Prabir Bhattacharya,1991 Since its genesis more than thirty five years ago the field of computer vision has been known by various names including pattern recognitions image analysis and image understanding The central problem of computer vision is obtaining descriptive information by computer analysis of images of a scene Together with the related fields of image processing and computer graphics it has become an established discipline at the interface between computer science and electrical engineering This volume contains fourteen papers presented at the AMS Special Session on Geometry Related to Computer Vision held in Hoboken New Jersey in Ooctober 1989 This book makes the results presented at the Special Session which previously had been available only in the computer science literature more widely available within the mathematical sciences community Geometry plays a major role in computer vision since scene descriptions always involve geometrical properties of and relations among the objects of surfaces in the scene The papers in this book provide a good sampling of geometric problems connected with computer vision They deal with digital lines and curves polygons shape decompositions digital connectedness and surfaces digital metrics and generalizations to higher dimensional and graph structured spaces Aimed at computer scientists specializing in image processing computer vision and pattern recognition as well as mathematicians interested in applications to computer science this book will provide readers with a view of how geometry is currently being applied to problems in computer vision   **Image Analysis and Processing II** V.
