Mathematical and Computational Models for Congestion Charging Siriphong Lawphongpanich,Donald W. Hearn,Michael J. Smith,2006-06-05 Although transportation economists have advocated the tolling of urban streets as a mechanism for controlling congestion and managing travel demands for over 50 years it is only recently that this idea has become practical When compared to the alternative of building more roads congestion pricing in particular via electronic tolling is attractive and has been adopted in countries around the world Recent implementations in London Singapore and various cities in Norway as well as a number of projects in the United States have been judged successful This book presents rigorous treatments of issues related to congestion pricing The chapters describe recent advances in areas such as mathematical and computational models for predicting traffic congestion determining when where and how much to levy tolls and analyzing the impact of tolls on transportation systems The analyses and methodologies developed in this book provide Mechanisms that aid in determining and comparing congestion pricing schemes Methodologies for evaluating the efficiency of existing and proposed congestion pricing schemes A means to predict the impact of pricing on urban transportation systems Information essential to the financial and political success of congestion pricing programs Current Issues in Mathematical Linguistics
