

One of the fundamental skills required for practising EBM is the asking of well-built clinical questions. To benefit patients and clinicians, such questions need to be both directly relevant to patients' problems and phrased in ways that direct your search to relevant and precise answers. In practice, well-built clinical questions usually contain four elements, summarised below.

	1	2	3	4
	Patient or Problem	Intervention (a cause, prognostic factor, treatment, etc.)	Comparison Intervention (if necessary)	Outcomes
Tips for Building	Starting with your patient, ask "How would I describe a group of patients similar to mine?" Balance precision with brevity.	Ask "Which main intervention am I considering?" Be specific.	Ask "What is the main alternative to compare with the intervention?" Again, be specific.	Ask "What can I hope to accomplish?" or "What could this exposure really affect?" Again, be specific.
Example	"In patients with heart failure from dilated cardiomyopathy who are in sinus rhythm ..."	"... would adding anticoagulation with warfarin to standard heart failure therapy ..."	"... when compared with standard therapy alone ..."	"... lead to lower mortality or morbidity from thromboembolism. Is this enough to be worth the increased risk of bleeding?"
