Structuring the Information Age JoAnne

Yates,2005-06-22 Structuring the Information Age provides insight into the largely unexplored evolution of information processing in the commercial sector and the underrated influence of corporate users in shaping the history of modern technology JoAnne Yates examines how life insurance firms where good record keeping and repeated use of massive amounts of data were crucial adopted and shaped information processing technology through most of the twentieth century The book analyzes this process beginning with tabulating technology the most immediate predecessor of the computer and continuing through the 1970s with early computers Yates elaborates two major themes the reciprocal influence of information technology and its use and the influence of past practices on the adoption and use of new technologies In the 1950s insurance industry leaders recognized that computers would enable them to integrate processes previously handled separately but they also understood that they would have to change their ways of working profoundly to achieve this integration When it came to choosing equipment and applications most companies ultimately preferred a gradual incremental migration to an immediate and radical transformation In tracing this process Yates shows that IBM s successful transition from tabulators to computers in part reflected that vendor s ability to provide large customers such as insurance companies with the necessary products to allow gradual change In addition this detailed industry case study helps explain information technology s so called productivity paradox showing that firms took roughly two decades to achieve the initial computerization and process integration that the industry set as objectives in the 1950s

Luftman, 2012

The Challenge Dean E. Tucker, 2006-03 This book is about the challenges facing managers today and the solutions to those challenges The most immediate challenge is the retirement of the Baby Boomer generation which will create a labor shortage of 10 million workers by 2008 To address this issue management must find a way to quickly increase productivity Compounding this problem is the fact that the new labor force will be sourced from Generations X and Y which have the following characteristics 1 They do not trust business or government 2 They are independent with a get off my back attitude 3 They have no fear of quitting and finding another job Generations X and Y will demand a balance between their work and personal life If they become unhappy they will just quit These characteristics will generate a high turnover rate causing many companies to be short handed Another challenge facing management is dealing with the disruptive changes of the information age In the information age the knowledge power base has shifted from management to the employee and the market power base has shifted from the producer to the consumer The information explosion is flattening the old hierarchies and dramatically increasing the rate of change These changes have turned the business environment upside down and rendered the Bureaucratic Management System that was created between 1850 and 1920 obsolete For example the Bureaucratic Management System is designed to resist change and maintain the status quo but the need is for adaptability and rapid change Is there a solution for these challenges that affect every employee and company The answer is yes However the solution will require the implementation of a new management system which is designed for the information age that can unleash the employee's potential and that dramatically increases productivity

Rethinking Management Information Systems Wendy Currie, Robert Galliers, 1999 This book examines influential ideas within Management Information Systems MIS Leading international contributors summarize key topics and explore a variety of issues currently being discussed in the field They re-visit influential ideas such as socio-technical theory systems thinking and structuration theory and demonstrate their relevance to newer ideas such as re-engineering hybrid management knowledge workers and outsourcing In locating MIS within an interdisciplinary context particularly in the light of rapid technological changes this book will form the link between past and future approaches to MIS
