

The net potential energy between two adjacent ions, E_N , may be represented by

$$E_N = -\frac{A}{r} + \frac{B}{r^n}$$

Calculate the **equilibrium interionic spacing** and **bond energy E_0** in terms of the parameters A , B , and n

Calculate the **equilibrium interionic spacing** and **bond energy E_0** for $K^+ - Cl^-$ where

$$E_R = \frac{5.8 \times 10^{-6}}{r^9} \quad (\text{eV})$$

$$E_A = -\frac{1.436}{r} \quad (\text{eV})$$

Use the graphical method and the analytical method.

$$\% \text{ ionic character} = \%IC = \left(1 - e^{-\frac{(X_A - X_B)^2}{4}} \right) \times 100\%$$

The Practical Calculation of Interionic Potentials in Solids, 1990 **The Practical Calculation of Interionic Potentials in Solids** A. H. Harker, R. W. Grimes, 1990-01-01 **Practical calculation of interionic potentials in solids**, 1990 The practical calculation of interionic potentials in solids Science and Engineering Research Council, University of Keele, 1990 **Condensed Matter: Disordered Solids** Toshio Itami, Norman H March, Fabio Siringo, S K Srivastava, Yoshio Waseda, 1995-08-31 This book deals with different aspects of the structure and properties of disordered materials Whenever the normal state of matter is affected by internal or external agencies and new states are developed it is generally observed that the new materials possess disordered structures However some characteristics such as the electronic and ionic remain similar to those of crystalline solids Such isotropic materials are also termed disordered solids This book surveys the physics of materials like non transition transition metals and alloys in their solid and liquid phases liquid amorphous solids and materials with super structures like fullerene lattices etc The advancements in these materials which possess unusual physical properties provide exciting possibilities for technology and industry Up to date investigations about theoretical and experimental techniques are presented here The reviews on different materials were prepared by renowned experts in the corresponding areas *New Methods for Modelling Processes Within Solids and at Their Surfaces* Charles Richard Arthur Catlow, A. M. Stoneham, John Meurig Thomas, 1993 This book considers theoretical models calculations and computer methods for a wide variety of states and processes in different types of solids and surfaces Topics include semiconductors and ceramic surfaces grain boundaries defects and impurities and such processes as growth and catalysis Computer simulations and calculations using parallel architectures are included Outstanding contributions from distinguished leaders in their respective fields make this volume an excellent guide to the recent developments in modelling processes It will be indispensable to researchers in many areas of solid materials **Electroactive Polymer Electrochemistry** Michael E.G. Lyons, 2013-06-29 The development of tailormade electrode surfaces using electroactive polymer films has been one of the most active and exciting areas of electrochemistry over the last 15 years The properties of these materials have been examined by a wide range of scientists from a variety of perspectives and now electroactive polymer research is considered to be a reasonably mature area of research endeavor Much is now understood about the fundamental mechanism of conduction in these materials A wide range of electrochemical techniques may be used to probe the conductivity processes in these materials and more recently a number of in situ spectroscopic techniques have been used to further elucidate the structure of these materials The in situ spectroscopies and allied techniques have also been used to obtain correlations between structure and redox activity The applications found for electroactive polymers are many and varied and range from thin film amperometric chemical and biological sensors electrocatalytic systems drug delivery devices and advanced battery systems through to molecular electronic devices The research literature on electroactive polymers is truly enormous and can

daunt even the most hardened researcher The vast quantity of material reported in the literature can also intimidate beginning graduate students Hence the present book The original idea for this book arose as a result of a series of lectures on chemically modified electrodes and electroactive polymers given by the writer to final year undergraduates at Trinity College Dublin Philosophical Transactions of the Royal Society of London ,1992 *Quantum Mechanical Cluster Calculations In Solid State Studies* Richard C A Catlow,Robin W Grimes,A L Shluger,1992-04-30 This review volume takes an indepth look at the current research done in this important area of solid state science Although the emphasis is on modelling the properties of definite materials perfect crystal lattices are also considered in some detail It is noteworthy that the review articles are written by some of the best known experts in the field Electroactive Polymer Electrochemistry: Methods and applications Michael E.
