**Abstract.** Let  $G$  be a finite group with the identity element  $e$ . The *proper order graph* of  $G$ , denoted by  $\mathcal{S}^*(G)$ , is an undirected graph with a vertex set  $G \setminus \{e\}$ , where two distinct vertices  $x$  and  $y$  are adjacent whenever  $\alpha(x) \mid \alpha(y)$  or  $\alpha(y) \mid \alpha(x)$ , where  $\alpha(x)$  and  $\alpha(y)$  are the orders of  $x$  and  $y$ , respectively. This paper studies the perfect codes of  $\mathcal{S}^*(G)$ . We characterize all connected components of a proper order graph and give a necessary and sufficient condition for a connected proper order graph. We also determine the perfect codes of the proper order graphs of a few classes of finite groups, including nilpotent groups, CP-groups, dihedral groups and generalized quaternion groups.

**Keywords:** perfect code, proper order graph, finite group.

### 1. INTRODUCTION

In the field of algebraic graph theory, a popular and interesting research topic is groups and graphs, which is the study of the graph representations of an algebraic structure, such as a group or a ring, for example, the celebrated Cayley graphs over groups. Furthermore, graphs associated with some algebraic structures have been actively investigated in the literature since they have valuable applications, see, for example, Cayley graphs in data mining [18]. They are also related to the automata theory [16].

Another well-known graph representation by a group is the power graph. Let  $G$  be a group. The *directed power graph* of  $G$  is a digraph with a vertex set  $G$ , and for distinct  $x, y \in G$ , there exists a directed edge from  $x$  to  $y$  if and only if  $y$  is a power of  $x$ . In 2000, Kelarev and Quinn [17] first introduced the directed power graph of a group. In 2009, Chakrabarty et al. [6] introduced the undirected power graph  $\mathcal{P}(S)$  of a semigroup  $S$ , which is an undirected graph with a vertex set  $S$ , and two distinct vertices are adjacent if one is a power of the other. Since a group is also a semigroup, the definition of an undirected power graph  $\mathcal{P}(G)$  of a group  $G$  is also introduced in [6]. In the past ten years, the study of power graphs has been growing. See, for example, the two survey papers [2, 20] containing almost all the results and open questions on power graphs. In recent years, some authors generalized and modified the concept of a power graph in various ways, such
