A Different View of Auditory Intensity Discrimination

David M. Green *Harvard University*

ABSTRACT: *This article describes some auditory experiments involving the detection of a change in the spectrum of a brief auditory signal. Unlike the more traditional view of intensity discrimination that emphasizes a change in level in a particular frequency band, a new view based on the evaluation of the overall shape or profile of the spectrum is proposed. This new view is different in several ways from the traditional description. First, the memory requirements appear to be quite different, as demonstrated in an experiment in which the interstimulus interval is changed. Second, the mechanism of detecting the change appears to be global rather than local, since detection improves as the spectrum increases in width and density. Despite the global nature of the process, one does not seem to be able to combine spectral estimates across the two ears. Finally, the idea of profile analysis is applied to the problem of detecting a sinusoid in noise and to the results obtained when signal frequency is uncertain.*

This article analyzes the common auditory problem of detecting a difference between two sounds. This analysis is restricted to sounds that differ only in the intensity of some part of their spectra. Examples of problems usually treated under this restriction are the detection of an increment in a sinusoidal signal, the detection of a weak signal in noise, or the change in intensity of some component or components of a multicomponent signal.

There are two general accounts of how intensity discrimination is carried out. The first is a traditional view, one that has developed during the past 20 years and that still represents the best current theoretical position we have for dealing with a certain set of intensity discrimination problems. The second view, which we call profile analysis, represents, in part, the realization that certain problems of intensity discrimination may involve mechanisms and processes quite different from those described in the traditional view. Profile analysis stresses the importance of certain variables that the traditional view largely ignored. By the same token, profile analysis suggests that other variables, held to be crucial in the traditional view, are largely unimportant.

These two views are not exclusive. When discriminating the change in the intensity of a single pure tone, for example, the traditional view is the only analysis possible because no profile is available. But in a number of situations there is appreciable energy distributed throughout the spectrum. This energy, which the traditional view ignores, becomes part of a "profile" that can strongly influence our ability to detect a small change in energy in some other part of the spectrum.

The task, then, is not to choose between the two views, but to determine those situations in which one or the other view is more appropriate. This article's organization is not chronological, and the theoretical issues described in the first part did not motivate the experimental work presented later. Rather, a number of experimental results suggested something amiss with the traditional view, and further experimental work suggested the idea of a profile. Still further work has clarified some of the properties of this concept, but additional work is needed to understand the process in more detail and to answer the many important questions that remain unanswered. The results presented here largely summarize what we have learned in the past two years.

Finally, I should indicate the thanks I owe to my collaborators in this effort, Murray Spiegel and Gerald Kidd, who were postdoctoral fellows in my laboratory, and Maria Picardi, who programmed many of the experiments and collected some of the data.

Theory

Figure 1 displays, in its simplest terms, the difference between what I shall call the traditional view and profile analysis. The difference is illustrated in a two-alternative forced-choice task. The observer's task is to detect the signal increment added to one of two sounds presented at two different times. The figure illustrates the spectra of the two sounds and the measurements presumed to be made by the observer in trying to detect the difference. The nature of the measurement is not known in detail, but we will try to characterize its general features in the discussion that follows. The figure highlights that the critical difference is whether the comparison is between two

Profile Analysis David Marvin Green,1988 This book brings together recent research on the ability of human listeners to discern changes in the shape of complex acoustic spectra It systematically discusses issues surrounding the discrimination of a change in acoustic intensity and the physiological mechanisms responsible for this process The book also proposes two new theories which attempt to explain spectral shape discrimination on the basis of more elementary auditory processes The research described here is helping scientists gain a better understanding of auditory skills such as those involved in listening to music and speech

Sensation and Judgment John C. Baird,2014-02-25 Psychophysical theory exists in two distinct forms one ascribes the explanation of phenomena and empirical laws to sensory processes Context effects arising through the use of particular methods are an unwanted nuisance whose influence must be eliminated so that one isolates the true sensory scale The other considers psychophysics only in terms of cognitive variables such as the judgment strategies induced by instructions and response biases Sensory factors play a minor role in cognitive approaches This work admits the validity of both forms of theory by arguing that the same empirical phenomena should be conceptualized in two alternative apparently contradictory ways This acceptance of opposites is necessary because some empirical phenomena are best explained in terms of sensory processes while others are best ascribed to central causes The complementarity theory stresses the mutually completing nature of two distinct models The first assigns importance to populations of sensory neurons acting in the aggregate and is formulated to deal with sensory effects The second assigns importance to judgment uncertainty and to the subject strategies induced by experimental procedures This model is formulated to explain context effects Throughout the text the exposition is interlaced with mathematics graphs and computer simulations designed to reveal the complementary nature of psychophysical explanations

Profile Analysis Auditory Intensity Discrimination Introduction

In this digital age, the convenience of accessing information at our fingertips has become a necessity. Whether its research papers, eBooks, or user manuals, PDF files have become the preferred format for sharing and reading documents. However, the cost associated with purchasing PDF files can sometimes be a barrier for many individuals and organizations. Thankfully, there are numerous websites and platforms that allow users to download free PDF files legally. In this article, we will explore some of the best platforms to download free PDFs. One of the most popular platforms to download free PDF files is Project Gutenberg. This online library offers over 60,000 free eBooks that are in the public domain. From classic literature to historical documents, Project Gutenberg provides a wide range of PDF files that can be downloaded and enjoyed on various devices. The website is user-friendly and allows users to search for specific titles or browse through different categories. Another reliable platform for downloading Profile Analysis Auditory Intensity Discrimination free PDF files is Open Library. With its vast collection of over 1 million eBooks, Open Library has something for every reader. The website offers a seamless experience by providing options to borrow or download PDF files. Users simply need to create a free account to access this treasure trove of knowledge. Open Library also allows users to contribute by uploading and sharing their own PDF files, making it a collaborative platform for book enthusiasts. For those interested in academic resources, there are websites dedicated to providing free PDFs of research papers and scientific articles. One such website is Academia.edu, which allows researchers and scholars to share their work with a global audience. Users can download PDF files of research papers, theses, and dissertations covering a wide range of subjects. Academia.edu also provides a platform for discussions and networking within the academic community. When it comes to downloading Profile Analysis Auditory Intensity Discrimination free PDF files of magazines, brochures, and catalogs, Issuu is a popular choice. This digital publishing platform hosts a vast collection of publications from around the world. Users can search for specific titles or explore various categories and genres. Issuu offers a seamless reading experience with its user-friendly interface and allows users to download PDF files for offline reading. Apart from dedicated platforms, search engines also play a crucial role in finding free PDF files. Google, for instance, has an advanced search feature that allows users to filter results by file type. By specifying the file type as "PDF," users can find websites that offer free PDF downloads on a specific topic. While downloading Profile Analysis Auditory Intensity Discrimination free PDF files is convenient, its important to note that copyright laws must be respected. Always ensure that the PDF files you download are legally available for free. Many authors and publishers voluntarily provide free PDF versions of their work, but its essential to be cautious and verify the authenticity of the source before downloading Profile Analysis Auditory Intensity Discrimination. In conclusion, the internet offers numerous platforms and websites that

allow users to download free PDF files legally. Whether its classic literature, research papers, or magazines, there is something for everyone. The platforms mentioned in this article, such as Project Gutenberg, Open Library, Academia.edu, and Issuu, provide access to a vast collection of PDF files. However, users should always be cautious and verify the legality of the source before downloading Profile Analysis Auditory Intensity Discrimination any PDF files. With these platforms, the world of PDF downloads is just a click away.

FAQs About Profile Analysis Auditory Intensity Discrimination Books

What is a Profile Analysis Auditory Intensity Discrimination PDF? A PDF (Portable Document Format) is a file format developed by Adobe that preserves the layout and formatting of a document, regardless of the software, hardware, or operating system used to view or print it. **How do I create a Profile Analysis Auditory Intensity Discrimination PDF?**

There are several ways to create a PDF: Use software like Adobe Acrobat, Microsoft Word, or Google Docs, which often have built-in PDF creation tools. Print to PDF: Many applications and operating systems have a "Print to PDF" option that allows you to save a document as a PDF file instead of printing it on paper. Online converters: There are various online tools that can convert different file types to PDF. **How do I edit a Profile Analysis Auditory Intensity Discrimination PDF?**

Editing a PDF can be done with software like Adobe Acrobat, which allows direct editing of text, images, and other elements within the PDF. Some free tools, like PDFescape or Smallpdf, also offer basic editing capabilities. **How do I convert a**
