J.-M. Hoc,2014-05-19 Psychology provides a backdrop for most of the study of human b1computer interaction In this volume the psychological issues that pertain to programming rather than systems design are examined in four sections Theoretical and Methodological Issues Language Design and Skill Acquisition Expert Programming and the Future The book was inspired by working groups in France and the United Kingdom but also includes work by major North American figures such as Curtis and Soloway It is the first comprehensive work on this topic since the early 1980s **Novice Programming Environments** Marc Eisenstadt,Mark Keane,Tim Rajan,2018-05-15 This book originally published in 1992 encapsulates ten years of research at the Open University s Human Cognition Research Laboratory The research investigates the problems of novice programmers and is strongly oriented toward the design and implementation of programming environments aimed at eliminating or easing novices problems A range of languages is studied Pascal SOLO Lisp Prolog and Knowledge Engineering Programming The primary emphasis of the empirical studies is to gain some understanding of novices mental models of the inner workings of computers Such erroneous models are constructed by novices in their own heads to account for the idiosyncrasies of particular programming languages The primary emphasis of the implementations described in the book is the provision of automatic debugging aids i e artificial intelligence programs which can analyse novices buggy programs and make sense of them thereby providing useful advice for the novices Another related strand taken in some of the work is the concept of pre emptive design i e the provision of tools such as syntax directed editors and graphical tracers which help programmers avoid many frequently occurring errors A common thread throughout the book is its Cognitive Science Artificial Intelligence orientation AI tools are used for instance to construct simulation models of subjects writing programs in order to provide insights into what their deep conceptual errors are At the other extreme AI programs which were developed in order to help student debug their programs are observed empirically in order to ensure that they provide facilities actually needed by real programmers This book will be of great interest to advanced undergraduate postgraduate and professional researchers in Cognitive Science Artificial Intelligence and Human Computer Interaction *The Programmer's Apprentice Project* Charles Rich,Richard C. Waters,1987 The goal of the Programmer s Apprentice project is to develop a theory of how expert programmers analyze synthesize modify explain specify verify and document programs This research goal overlaps both artificial intelligence and software engineering From the viewpoint of artificial intelligence we have chosen programming as a domain in which to study fundamental issues of knowledge representation and reasoning From the viewpoint of software engineering we seek to automate the programming process by applying techniques from artificial intelligence **Software Development Tools** W.E. Riddle,R.E. Fairley,2012-12-06 This text contains the proceedings of a workshop on software develoDment tools held at Pingree Park Colorado in May 1979 The workshop for which we were co chair men was primarily but not exclusively concerned with a variety of tools supporting pre implementation phases of software development The workshop brought together researchers and practitioners from

industrial governmental and academic sectors to compare and assess current work and to set some directions for future work in this emerging technical area The fifty participants represented research and development efforts in software tools within the United States Canada France Great Britain and Japan A list of participants appears at the end of the text Sponsorship was provided by the National Aeronautics and Space Administration the National Bureau of Standards the National Science Foundation and Digital Equipment Corporation The conference consisted of seven formal sessions and numerous organized and impromptu discussions Each session except the last included invited papers prepared remarks by discussants and an open discussion **Generative and Component-Based Software Engineering** Krzysztof Czarnecki,Ulrich W. Eisenecker,2003-06-26 In the past two years the Smalltalk and Java in Industry and Education C ference STJA featured a special track on generative programming which was organized by the working group Generative and Component Based Software Engineering of the Gesellschaft fur Informatik FG 2 1 9 Object Oriented Software Engineering This track covered a wide range of related topics from domain analysis software system family engineering and software product nes to extendible compilers and active libraries The talks and keynotes directed towards this new software engineering paradigm received much attention and terest from the STJA audience Hence the STJA organizers suggested enlarging this track making it more visible and open to wider international participation This is how the GCSE symposium was born The rst GCSE symposium attracted 39 submissions from all over the world This impressive number demonstrates the international interest in generative programming and related elds After a careful review by the program comm tee fteen papers were selected for presentation We are very grateful to the members of the program committee all of them renowned experts for their dedication in preparing thorough reviews of the submissions Special thanks go to Elke Pulvermuller and Andreas Speck who proposed and organized a special conference event the Young Researches Workshop YRW This workshop provided a unique opportunity for young scientists and Ph D **Apprenticeship Patterns** Dave Hoover,Adewale Oshineye,2009-10-02 Are you doing all you can to further your career as a software developer With today s rapidly changing and ever expanding technologies being successful requires more than technical expertise To grow professionally you also need soft skills and effective learning techniques Honing those skills is what this book is all about Authors Dave Hoover and Adewale Oshineye have cataloged dozens of behavior patterns to help you perfect essential aspects of your craft Compiled from years of research many interviews and feedback from O Reilly s online forum these patterns address difficult situations that programmers administrators and DBAs face every day And it s not just about financial success Apprenticeship Patterns also approaches software development as a means to personal fulfillment Discover how this book can help you make the best of both your life and your career Solutions to some common obstacles that this book explores in depth include Burned out at work Nurture Your Passion by finding a pet project to rediscover the joy of problem solving Feeling overwhelmed by new information Re explore familiar territory by building something you ve built before then use Retreat into Competence to move

forward again Stuck in your learning Seek a team of experienced and talented developers with whom you can Be the Worst for a while Brilliant stuff Reading this book was like being in a time machine that pulled me back to those key learning moments in my career as a professional software developer and instead of having to learn best practices the hard way I had a guru sitting on my shoulder guiding me every step towards master craftsmanship I ll certainly be recommending this book to clients I wish I had this book 14 years ago Russ Miles CEO OpenCredo   IJCAI Proceedings 1979 Ijcai,1979   *Empirical Studies of Programmers* Curtis R. Cook,Jean C. Scholtz,James C. Spohrer,1993 This volume looks at the obvious trend in the computing evolution from studies of student programmers and toward studies of real programmers performing real programming tasks The percentage of student and professional programmers in the studies reported in papers presented at ESP 1 and ESP 5 has nearly flip flopped There is now an emphasis on the practical application of the research results both in industry and in academia The papers and posters of this workshop include a range of programming language paradigms beyond the procedural paradigm functional logic visual object oriented and concurrent programming This appears to be an indication of the maturation of the field No longer is it a question of whether to study programmers but more a question of which apsects of the porgramming that make it an important area of study   *Software Engineering* Herbert Freeman,Philip M. Lewis,1980 An important goal of this workshop was to establish a dialogue between three of the groups that have an important stake in this new technology the researchers who are actually creating the new technology industrial and government managers who see the current problems every day and who will be the eventual customers for the new technology and funding agencies mostly in government who are supporting much of the current research   **Clipper Programmer's Reference** W.
