Programmers At Work:

Programmers at Work Susan Lammers, 1989 *Programmers at Work* is a collection of captivating interviews with 20 of today's most notable programmers. The interviews highlight the forces, the events, and the personality traits that influenced today's software movers and shakers.

Programmers at Work Susan M. Lammers, 1989 **Programmers at Work: Interviews** Susan Lammers, 1986 [Programmers at Work](#) Susan Lammers, 2026-07-14 *Programmers at Work* does for budding software writers what the *Paris Review* interviews did for would-be fiction writers. It provides comfort, inspiration, and a sense of community with those who have already succeeded in the field; it is not to be missed. Erik Sandberg Diment, *The New York Times*. They had 64 kilobytes. They built the world. At the outset of personal computing, the engineers who invented it had almost nothing to work with and used that nothing to create everything. *Programmers at Work* 40th Anniversary Edition brings together landmark interviews with nineteen of the most influential software architects who ever lived: Charles Simonyi, who shaped modern productivity software at Microsoft; Dan Bricklin and Bob Frankston, who invented the spreadsheet; Andy Hertzfeld, who conjured the original Macintosh; and fifteen more who wrote the code that changed how humanity thinks, works, and creates. These interviews are not just retrospectives. They are primary sources, candid, technical, alive, capturing how these minds actually worked, how they designed under pressure, wrote code in memory-starved machines, and solved problems that no one had ever encountered before. Their insights are both a history of a revolutionary era and a masterclass in constraint-driven engineering. As edge computing, IoT, and robotics once again demand that developers do more with radically less, the discipline forged in the 64KB era turns out to be exactly the discipline the future requires. Complete with original program diagrams, algorithms, and code samples, *Programmers at Work* is the rare technical book that is also a remarkable story and the rare history book that is also a working manual. List of software architects included: Charles Simonyi, Butler Lampson, John Warnock, Gary Kildall, Bill Gates, John Page, C. Wayne Ratliff, Dan Bricklin, Bob Frankston, Jonathan Sachs, Ray Ozzie, Peter Roizen, Bob Carr, Jef Raskin, Andy Hertzfeld, Toru Iwatani, Scott Kim, Jaron Lanier, Michael Hawley. *Coders at Work* Peter Seibel, 2009-12-21 *Peter Seibel interviews 15 of the most interesting computer programmers alive today in Coders at Work*, offering a companion volume to Apress's highly acclaimed best-seller *Founders at Work* by Jessica Livingston. As the words at work suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming while revealing much more like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen, Pioneer in optimizing compilers, first woman to win the Turing Award 2006 and first female IBM fellow; Joe Armstrong, Inventor of Erlang; Joshua Bloch, Author of the Java Collections framework, now at Google; Bernie Cosell, One of the
