

Question:

A force F is exerted at an angle θ on a box of mass m as it is dragged across the floor at constant velocity. If the box travels a distance x , then the work done by the force F on the box is

- a. Fx
- b. $Fx \cos \theta$
- c. $mgx \cos \theta$
- d. $Fx \sin \theta$
- e. $Fx \tan \theta$

©2009, Richard White, LearnAPphysics.com

Answer:

The correct answer is *b*. Work done by an object is calculated according to the Work formula $W = F \cdot x$, or $W = Fx \cos \theta$. There are a couple of distractors in this problem: the mass m of the box is not needed in the solution, and the box's constant velocity isn't required.

The fact that the box is traveling at constant velocity implies that there is friction impeding its motion, but evidently the energy "lost" to friction is equal to the work being done by the force F , so that the net Work done on the box by F and $F_{friction} = 0$. None of this information is necessary, though, to solve the problem.
