For its Second Edition, this book has been expanded and thoroughly rewritten to keep pace with knowledge of physical agents in physical therapy. Major changes have been made in the sections on pain and on nerve and muscle stimulating currents. The chapters on other topics — the laser, ultrasound, infrared energies, ultraviolet light and ultrasonic energy — also as well as the theoretical and practical aspects of ionization, are also completely new. Clinically useful material, special care has been taken to provide in greater depth the rationale and contraindications for laser treatments and equipment. One feature of the text has not changed in any conception and providing the reader with the information required to choose and use physical agents in an especially effective manner.
