Microcrystal Polymer Science Orlando Aloysius Battista, 1975 Microcrystal Polymer Science Orlando Aloysius Battista, 1975 The Nanoscience and Technology of Renewable Biomaterials Lucian A. Lucia, Orlando Rojas, 2009-07-23

The unique nanoscale properties of renewable biomaterials present valuable opportunities in the field of nanoscience and technology. Lignocellulosic biomass is an important industrial resource which can be used for the production of highly efficient and environmentally sustainable nanomaterials. The Nanoscience and Technology of Renewable Biomaterials presents the latest advances in biomass nanotechnology including leading research from academia and industry as well as a future vision for the nanotechnology of forest products. Topics covered include:

- A fundamental review of the relationship between nanotechnology and lignocellulosic biomass.
- Characterization methods for biomass on the nanometer scale.
- Cellulose, hemicelluloses, and lignin as nanoscopic biomaterials: physical features, chemical properties, and potential nanoproducts.
- Nanoscale surface engineering.
- Renewable materials as scaffolds for tissue engineering.
- Nanoscopically controlled drug delivery.

This book will be a valuable resource for chemists, chemical engineers, bioscience researchers, and materials scientists who are interested in harnessing the nanotechnological features of renewable biomaterials.

Renewable Resources for Functional Polymers and Biomaterials Peter A Williams, 2015-11-09

This book details polysaccharides and other important biomacromolecules covering their source, production, structures, properties, and current and potential application in the fields of biotechnology and medicine. It includes a systematic discussion on the general strategies of isolation, separation, and characterization of polysaccharides and proteins. Subsequent chapters are devoted to polysaccharides obtained from various sources including botanical, algal, animal, and microbial. In the area of botanical polysaccharides, separate chapters are devoted to the sources, structure, properties, and medical applications of cellulose and its derivatives, starch and its derivatives, pectins, and exudate gums, notably gum arabic. Another chapter discusses the potential of hemicelluloses, xylans, and xylan derivatives as a new source of functional biopolymers for biomedical and industrial applications. The algal polysaccharide alginate has significant application in food, pharmaceuticals, and the medical field, all of which are reviewed in a separate chapter. Polysaccharides of animal origin are included with separate chapters on the sources, production, biocompatibility, biodegradability, and biomedical applications of chitin, chitosan, and hyaluronan. With the increasing knowledge and applications of genetic engineering, there is also an introduction in the book to nucleic acid polymers, the genome, research, and genetic engineering. Proteins and protein conjugates are covered with one chapter providing a general review of structural glycoproteins, fibronectin, and laminin, together with their role in the promotion of cell adhesion in vascular grafts, implants, and tissue engineering. Another chapter discusses general aspects of a number of industrial proteins, including casein, caseinates, whey protein, gluten, and soy proteins, with emphasis on their medical applications and with reference to the potential of bacterial proteins. Another natural polymer resource, microbial polyesters, although small compared with

polysaccharides and proteins is also gaining increasing interest in biomedical technology and other industrial sectors One chapter therefore is devoted to microbial polyesters with comprehensive coverage of their biosynthesis properties enzymic degradation and applications By dealing with biopolymers at the molecular level the book is aimed at the biomedical and wider materials science communities and provides an advanced overview of biopolymers at the graduate and postgraduate level In addition it will appeal to both academic and industrial life scientists who are involved in research and development activities in the medical and biotechnology field

Handbook of Nanophysics Klaus D. Sattler, 2016-04-19 In the 1990s nanoparticles and quantum dots began to be used in optical electronic and biological applications Now they are being studied for use in solid state quantum computation tumor imaging and photovoltaics Handbook of Nanophysics Nanoparticles and Quantum Dots focuses on the fundamental physics of these nanoscale materials and structures

Development of Packaging Film Using Microcrystalline Cellulose and Pro-Oxidative Additive Using Blown Film Technique Pathik Shah, Kalpana Pandey, 2017-11-01 The purpose of this study is to develop a degradable Cellulose based packaging film with improved mechanical properties A series of Linear Low Density Polyethylene LLDPE Microcrystalline Cellulose composites were prepared by twin screw extrusion with the addition of maleic anhydride grafted polyethylene as compatibilizer and TiO₂ as pro oxidative additives Polyethylene wax was used as processing aid to ease the blown film process The film was processed via a conventional blown film machine

The Global Forest Sector Eric Hansen, Rajat Panwar, Richard Vlosky, 2013-12-04 Changes in production demand supply and trade patterns the impact of green building and bioenergy on industry practices and policy infrastructure and new economies with production advantages and large consumption bases all present challenges and opportunities in the forest sector With contributions from leading experts in academia and professional organizations The Global Forest Sector Changes Practices and Prospects fills a gap in the literature that is preventing students scholars and policy makers from developing a timely structured big picture view of forest sector business In addition the book reviews current thinking on a wide variety of business management issues in the forest sector The book covers managing change in the global forest sector and the impact of globalization on forest users It discusses markets and market forces new products and product categories and the influence of China and Russia The book then examines the environmental paradigm including environmental activism sustainability and the impact of green building and bioenergy The book concludes with coverage of the role of information technology corporate social responsibility innovation and next steps Overall this book helps readers both develop a bird s eye view of the changes surrounding the forest sector as well as have a magnified view of numerous managerial issues associated with these changes The content paints a picture of the current and changing forest sector including the state of forests the nature of markets the newly emerged patterns of stakeholder impact and evolution of key business practices It provides the foundation needed to develop the conservation based economy required for future success in the global forest sector
