Research Directions In Object Oriented Programming Computer Systems Series:

Research Directions in Object-oriented Programming Bruce D. Shriver, Peter Wegner, 1987 Once a radical notion object oriented programming is one of today's most active research areas. It is especially well suited to the design of very large software projects involving many programmers all working on the same project. The original contributions in this book will provide researchers and students in programming languages, databases, and programming semantics with the most complete survey of the field available. Broad in scope and deep in its examination of substantive issues, the book focuses on the major topics of object oriented languages, models of computation, mathematical models, object oriented databases, and object oriented environments. The object oriented languages include Beta, the Scandinavian successor to Simula, a chapter by Bent Kristensen whose group has had the longest experience with object oriented programming, reveals how that experience has shaped the group's vision today. CommonObjects, a Lisp based language with abstraction, Actors, a low level language for concurrent modularity, and Vulcan, a Prolog based concurrent object oriented language. New computational models of inheritance, composite objects, block structure, layered systems, and classification are covered, and theoretical papers on functional object oriented languages and object oriented specification are included in the section on mathematical models. The three chapters on object oriented databases, including David Maier's Development and Implementation of an Object Oriented Database Management System, which spans the programming and database worlds by integrating procedural and representational capability and the requirements of multi user persistent storage, and the two chapters on object oriented environments, provide a representative sample of good research in these two important areas. Bruce Shriver is a researcher at IBM's Thomas J. Watson Research Center. Peter Wegner is a professor in the Department of Computer Science at Brown University. Research Directions in Object Oriented Programming is included in the Computer Systems series edited by Herb Schwetman.

ECOOP '96 - Object-Oriented Programming Pierre Cointe, 1996-06-26 This book constitutes the refereed proceedings of the 10th European Conference on Object Oriented Programming ECOOP 96 held in Linz, Austria, in July 1996. The 21 full papers included in revised version were selected from a total of 173 submissions based on technical quality and originality criteria. The papers reflect the most advanced issues in the field of object oriented programming and cover a wide range of current topics including applications, programming languages, implementation, specification, distribution, databases, and design.

Research Directions in Concurrent Object-Oriented Programming Gul Agha, Peter Wegner, Akinori Yonezawa, 2003-02-01 This collection of original research provides a comprehensive survey of developments at the leading edge of concurrent object oriented programming. It documents progress from general concepts to specific descriptions in programming language design, semantic tools, systems architectures, and applications. Chapters are written at a tutorial level and are accessible to a wide audience including researchers, programmers, and technical managers. The problem of designing systems for concurrent programming has become an increasingly important area of research in computer science with a

concomitant increase in the popularity of object based programming Because parallelism is a natural consequence of the use of objects the development of systems for concurrent object oriented programming is providing important software support for a new generation of concurrent computers

Ada: The Design Choice Angel Alvarez,1989-07-06 This book contains the proceedings of the 1989 Ada Europe conference These meetings constitute the most significant events in this field within Europe and attract delegates from around the world The theme of this year s conference is design methods this is of major importance since both Ada compilers and the applications built with Ada are huge Papers in this volume which have all been carefully refereed study the design methods within Ada and how they may need to be augmented with additional methods and tools where necessary They make informed and essential reading for all involved in the use of Ada in industry and research
