Research Directions In Software Technology:

Research Directions in Software Technology Peter Wegner,1979-01 The primary purpose of this book is to provide an understandable but nontrivial description by active research workers of concepts and research issues in principal subareas of software technology It should be useful to both the specialist and the technical layman as a source of factual information about research issues and can serve as a starting point for discussions of what to do next We hope it will make practitioners aware of the practical contributions of research make researchers aware of the needs of technology and serve to stimulate greater collaboration between practitioners and research workers An even more ambitious objective is to encourage dialogue among research workers in different areas such as computer architecture programming languages and data base management so that the basis for an integrated approach to computer systems can be established Last but not least this study may be useful to funding agencies and other policy making bodies in making policy decisions concerning future support of research

Exploring Higher Vocational Software Technology Education Chen Ping,2024-09-30 Exploring Higher Vocational Software Technology Education offers a comprehensive analysis of the current landscape of software technology education in Chinese vocational colleges It addresses the challenges and opportunities in cultivating skilled software professionals in the rapidly evolving digital economy The book covers key areas such as curriculum design practical teaching and faculty development providing actionable insights for educators administrators and policymakers Through comparative analysis with international best practices it offers recommendations for optimizing software technology education to better meet industry demands The book also features case studies highlighting innovative approaches such as school enterprise collaboration and project driven learning which are essential in bridging the gap between theory and practice This work serves as a valuable reference not only for Chinese educators but also for an international audience interested in understanding China s vocational education model and how it can inform global education reform Whether you re an academic a practitioner or a policymaker this book offers practical pathways for enhancing the quality of technical talent development in today s competitive global market

Maintenance - A Management Perspective Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and

science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
