groundwater projects have included a 15-day chamber test (Phase I) in which plants provided microclimate for a single subject and a 30-day chamber test (Phase II) in which an integrated regenerative life support system was demonstrated with four humans in a closed chamber. The objective of the Life Support Systems Integration Facility, was also used during Phase III. This was a 90-day demonstration of life support technologies. The air revitalization system is a water recovery system, intended for use onboard the International Space Station (ISS). [10] In total, investigators and medical support personnel from the Medical Sciences Division, in the Exercise Physiology Laboratory (ENL), were invited to evaluate their planned protocols.

The Trinity Aquifer is widespread and furnishes small to moderate amounts of groundwater to entities in 17 countries. In the arid portions of the aquifer development has resulted in significant declines in the water table.
