Abstract—In this research; a problem situation, which requires the ability of thinking in three dimensions, was developed by the researchers. As the purpose of this paper is producing a modeling task suggestion, the problem was visualized and analyzed in GeoGebra3D environment. Then visual solution was also been supported by algebraic approach. So, the capability of creating the relationship between geometric and algebraic representations in GeoGebra was also presented in 3D sense.

Keywords—component; Modelling; GeoGebra 3D; Paper Folding.

I. INTRODUCTION

There are several studies on modeling the real life situations in GeoGebra [2, 3, 4, 5]. In this research, a problem situation has been suggested and modeling process in GeoGebra has been explained. Zbiek and Conner pointed out, modeling contributes to understand the fore known mathematical concepts thoroughly by demonstrating the applicability of mathematical thoughts to real life, to learn new mathematical concepts, to establish inter disciplinary relations and to both conceptual and operational development of the students studying in modeling processes [6]. Furthermore, the algebraic and geometric representations are needed to be connected in two ways [1,7]. That is, the modeling should present the advantage of understanding how algebraic facts effect the observed situations.

The problem can be described as follows according to the figure 1 and figure 2. Let's call the intersection point of the segment $[AL]$ and the line passing through the point D and parallel to segment $[DM]$ as B and the intersection point of the segment $[DK]$ and the line passing through the point C and parallel to the segment $[AL]$ as A. So, the rectangle DABC and the triangles $\triangle DMA$, $\triangle KB$, $\triangle LC$ and $\triangle MD$ can be obtained, such that the points D and A can be moved dynamically on the segments on which they are located.¹

¹A short summary of this article has been submitted to The International GeoGebra Institute Conference 2012 on 21-23 September 2012.¹

Figure 1: Statement of pre-folding

The problem was stated as “for which locations of the dynamic points A and B, the segments $[OL]$ and $[KM]$ intersect?” in the research (Figure 2). The mathematical concepts related to the solution can be summarized as algebraic approach, line equations, slope, point and vector in three dimensional space and scalar triple product. As a short result, it can be stated that at least one of the points A and B must be in the midpoint of the segments on which they are located after visualization in the environment of GeoGebra 5.0. It is expected that this kind of real situated activities are attractive for the students.

Figure 2: Statement of post-folding

II. UNDERSTANDING THE MODEL VISUALLY

The basic structure of the problem can be constructed as follows where the values of a, b, x_0 and y_0 defined as a slider tool. The points $O(0,0)$, $K(a,0)$, $L(a,b)$, $M(0,b)$ are the corners of the rectangle. The points $A(x_0,0)$, $C(x_0,b)$, $D(0,y_0)$ and $B(a,y_0)$, are dynamic points which are located on the sides of the rectangle and controlled by the sliders dynamically.
