Ring Close To Regular:

Near-Rings and Near-Fields Yuen Fong, Howard E. Bell, Wen-Fong Ke, Gordon Mason, Günter Pilz, 1995-07-31 Near Rings and Near Fields opens with three invited lectures on different aspects of the history of near ring theory These are followed by 26 papers reflecting the diversity of the subject in regard to geometry topological groups automata coding theory and probability as well as the purely algebraic structure theory of near rings Audience Graduate students of mathematics and algebraists interested in near ring theory

Selected Papers and Other Writings Irving Kaplansky, 1995-04-13 It is not often that one gets to write a preface to a collection of one's own papers The most urgent task is to thank the people who made this book possible That means first of all Hy Bass who on behalf of Springer Verlag approached me about the idea The late Walter Kaufmann Bihler was very encouraging Paulo Ribenboim helped in an important way and Ina Lindemann saw the project through with tact and skill that I deeply appreciate My wishes have been indulged in two ways First I was allowed to follow up each selected paper with an afterthought Back in my student days I became aware of the *Gesammelte Mathematische Werke* of Dedekind edited by Fricke Noether and Ore I was impressed by the editors notes that followed most of the papers and found them very useful A more direct model was furnished by the collected papers of Lars Ahlfors in which the author himself supplied afterthoughts for each paper or group of papers These were tough acts to follow but I hope that some readers will find at least some of my afterthoughts interesting Second I was permitted to add eight previously unpublished items My model here to a certain extent was the charming little book *A Mathematician's Miscellany* by J E Littlewood In picking these eight I had quite a selection to make from fourteen loose leaf notebooks of such writings Here again I hope that at least some will be found to be of interest

Splendour of the Heavens Theodore Evelyn Reece Phillips, William Herbert Stevenson, 1925

Smarandache Near-Rings W. B. Vasantha Kandasamy, 2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B in A which is embedded with a stronger structure S These types of structures occur in our everyday life that's why we study them in this book Thus as a particular case A Near Ring is a non empty set N together with two binary operations and such that N is a group not necessarily abelian N is a semigroup For all a, b, c in N we have $a(bc) = (ac)b$ A Near Field is a non empty set P together with two binary operations and such that P is a group not necessarily abelian $P \setminus \{0\}$ is a group For all a, b, c in P we have $a(bc) = (ac)b$ A Smarandache Near ring is a near ring N which has a proper subset P in N where P is a near field with respect to the same binary operations on N
