Ring Theory And Algebraic Geometry A. Granja,J.A. Hermida Alonso,A Verschoren,2001-05-08 Focuses on the interaction between algebra and algebraic geometry including high level research papers and surveys contributed by over 40 top specialists representing more than 15 countries worldwide Describes abelian groups and lattices algebras and binomial ideals cones and fans affine and projective algebraic varieties simplicial and cellular complexes polytopes and arithmetics

Rings and Geometry R. Kaya,P. Plaumann,K. Strambach,1985-09-30 When looking for applications of ring theory in geometry one first thinks of algebraic geometry which sometimes may even be interpreted as the concrete side of commutative algebra However this highly developed branch of mathematics has been dealt with in a variety of monographs so that in spite of its technical complexity it can be regarded as relatively well accessible While in the last 120 years algebraic geometry has again and again attracted concentrated interest which right now has reached a peak once more the numerous other applications of ring theory in geometry have not been assembled in a textbook and are scattered in many papers throughout the literature which makes it hard for them to emerge from the shadow of the brilliant theory of algebraic geometry It is the aim of these proceedings to give a unifying presentation of those geometrical applications of ring theory outside of algebraic geometry and to show that they offer a considerable wealth of beautiful ideas too Furthermore it becomes apparent that there are natural connections to many branches of modern mathematics e.g. to the theory of algebraic groups and of Jordan algebras and to combinatorics To make these remarks more precise we will now give a description of the contents In the first chapter an approach towards a theory of non commutative algebraic geometry is attempted from two different points of view

Vostokov, Yuri Zarhin, 2002 A N Parshin is a world renowned mathematician who has made significant contributions to number theory through the use of algebraic geometry Articles in this volume present new research and the latest developments in algebraic number theory and algebraic geometry and are dedicated to Parshin s sixtieth birthday Well known mathematicians contributed to this volume including among others F Bogomolov C Deninger and G Faltings The book is intended for graduate students and research mathematicians interested in number theory algebra and algebraic geometry

Rings, Polynomials, and Modules Marco Fontana, Sophie Frisch, Sarah Glaz, Francesca Tartarone, Paolo Zanardo, 2017-11-23 This volume presents a collection of articles highlighting recent developments in commutative algebra and related non commutative generalizations It also includes an extensive bibliography and lists a substantial number of open problems that point to future directions of research in the represented subfields The contributions cover areas in

commutative algebra that have flourished in the last few decades and are not yet well represented in book form. Highlighted topics and research methods include Noetherian and non Noetherian ring theory, module theory and integer valued polynomials along with connections to algebraic number theory, algebraic geometry, topology and homological algebra. Most of the eighteen contributions are authored by attendees of the two conferences in commutative algebra that were held in the summer of 2016: Recent Advances in Commutative Ring and Module Theory, Bressanone, Italy; Conference on Rings and Polynomials, Graz, Austria. There is also a small collection of invited articles authored by experts in the area who could not attend either of the conferences. Following the model of the talks given at these conferences, the volume contains a number of comprehensive survey papers along with related research articles featuring recent results that have not yet been published elsewhere.

Abstract Algebra Celine Carstensen, Benjamin Fine, Gerhard Rosenberger, 2011. A new approach to conveying abstract algebra, the area that studies algebraic structures such as groups, rings, fields, modules, vector spaces and algebras that is essential to various scientific disciplines such as particle physics and cryptology. It provides a well written account of the theoretical foundations, also contains topics that cannot be found elsewhere and also offers a chapter on cryptography. End of chapter problems help readers with accessing the subjects. This work is co published with the Heldermann Verlag and within Heldermann's Sigma Series in Mathematics.

Brauer Groups in Ring Theory and Algebraic Geometry, Representation Theory and Algebraic Geometry, A. Martsinkovsky, Gordana Todorov, 1997-05-15. For any researcher working in representation theory, algebraic or arithmetic geometry.

Algebraic Geometry Daniel Bump, 1998-12-07. This is a graduate level text on algebraic geometry that provides a quick and fully self contained development of the fundamentals including all commutative algebra which is used. A taste of the deeper theory is given, some topics such as local algebra and ramification theory are treated in depth. The book culminates with a selection of topics from the theory of algebraic curves including the Riemann-Roch theorem, elliptic curves, the zeta function of a curve over a finite field and the Riemann hypothesis for elliptic curves.

Polytopes, Rings, and K-Theory Winfried Bruns, Joseph Gubeladze, 2009-06-12. This book examines interactions of polyhedral, discrete geometry and algebra. What makes this book unique is the presentation of several central results in all three areas of the exposition: from discrete geometry to commutative algebra and K theory.
