

*Nine Gramemes*", *LJAL*, 24,273-92, 1958) would be useful in focusing attention on the "spots" which are structurally relevant. However, the general orientation of the approach adopted in this Synopsis is toward constructions in terms of immediate constituents, rather than the string of units which comprise the total frame.

The most useful recently developed technique and descriptive framework is "transformational analysis" (see Zellig S. Harris, "Co-occurrence and Transformation in Linguistic Structure", *Language*, 33, 1957, pp. 283-340; Noam Chomsky, *Syntactic Structures*, 's-Gravenhage, Mouton and Co., N.V., 1957; and Robert B. Lees, "Review of *Syntactic Structures* by Noam Chomsky", *Language*, 33, 1957, pp. 375-408). The recognition of transforms, in terms of basic kernel sentences capable of generating different types of constructions, would permit distinguishing between formally similar constructions which are structurally distinguishable because derived from different kernels and which in turn give rise to diverse constructions.

In addition to these four significant areas of major advance in descriptive methodology as related to syntax, there are of course a number of other important contributions, each of which would, in its area of special concern, influence any future revision of this type of synopsis. The most important of these articles and books are:

- Harris, Zellig S., "From Morpheme to Utterance", *Language*, 22,161-183 (1946).  
*Methods in Structural Linguistics* (Chicago, University of Chicago Press, 1951).  
 Wells, Rudon S., "Immediate Constituents", *Language*, 23 (1947), pp. 81-117.  
 Fries, Charles Carpenter, *The Structure of English; An Introduction to the Construction of English Sentences* (New York, Harcourt Brace and Co., 1952).  
 Bar-Hillel, Yehoshua, "A Quasi-Arithmetical Notation for Syntactic Description", *Language*, 29 (1953), pp. 47-58.

On the basis of the extent to which this Synopsis would require changing to bring it into line with contemporary developments in descriptive linguistics, it is legitimate to ask why it is being republished, especially since the original work was not intended for publication (which would have required fuller explanations of many technical terms, a more extensive introduction, and many more notes). The truth is that, quite contrary to expectation, there has been a consistent demand for copies of this dissertation. It has been put out in two multish editions of several hundred copies each, and more recently was in part published in Japan, with a special introduction and notes in Japanese. The reasons for this interest are probably twofold: (1) it is still the most extensive synopsis of English constructions described in terms of immediate constituents, and (2) it contains many useful lists of words functioning as syntactic classes.

In addition to the shortcomings noted above, the reader will inevitably recognize several others, including especially:

1. The lack of phonemic notation for the illustrative data.
2. An arrangement which places the immediate constituents of many constructions at some distance from each other in the outline.
3. A failure to treat alternative orders as fully as desirable.
